Maid of Erin Silver Mines Co.
This company was incorporated under the laws of Colorado, and their principal office is located at Denver, Col. The company owns 2 mining claims in the Leadville Mining Dist. which have been worked extensively for a great many years. They were practically abandoned about 1914, but since said time work has been done on them intermittently by lessees, and an occasional dividend of 1c or 2c a share has been paid. The properties are not now being worked, and probably will not be unless the price of silver should recover. Dines, Dines & Holme of Denver, Col., who are closely connected with the company, reported that in the past year they have valued the stock at about 8c per share for tax purposes. They also stated that it is practically impossible, however, to fix the value as there is no sale for the stock and practically no sale for the property. We were informed that the company was offered $25,000 for the property, which would net the stockholders about 8c per share.

Maid of Erin Silver Mines Co., Col.
Reorganized in 1912. $1.00 par stock was issued for old $5.00 par stock on basis of one new share for 2 old shares, and receive accumulated dividends from 1912.

Mr. Thomas A. Nevens, P. O. Box 500, Salido, Col., informed us as follows on Sept. 7, 1940:

"The Rawley Mines, Inc., junked the machinery on its property years ago and abandoned the property. The property was sold for taxes and acquired by A. J. Hall of Villa Grove, Col. He quieted title to the property some years ago. I have certificates for some of each class of stock in my vault that I would be glad to sell for a souvenir. As I remember the company paid, from the proceeds received for machinery, some small dividends on the first preferred stock but it was not paid off in full."

Blue Bird Mining & Milling Co., 1441 Walton St., Room 311, Denver, Col.

Following received from company, Dec. 30, 1939. The Golden Consolidated Mines Company was liquidated several years ago. Stockholders therein had an opportunity to exchange their stock for stock of the Blue Bird Mining & Milling

Company, and many did so. So far as we know, there is no market at the present time for the stock of the Blue Bird Company. In view of the present low price of the base metals such as copper, lead and zinc, it has not been practical to operate the principal properties of the company, and therefore the company has had no earnings. Several attempts have been made to raise capital to put the Henrietta Mines in condition for operating, but these attempts have been unsuccessful. During the summer of 1939 we had a considerable amount of work done on our more important unpatented claims in San Juan Co. And these holdings are thus protected under the government annual assessment requirements. We have been endeavoring to get substantial operations started and to lease or sell part of the property in an effort to raise sufficient capital to operate some of the other mines of the company, and this effort will be continued. In view of the present European war there should be a good possibility of doing this, if the war continues very long. Any new developments in connection with the company will be outlined to stockholders at such times as they may take place.

We received the following letter from the Blue Bird Mining & Milling Company, 1441 Walton St., No. 311, Denver, Col., dated Dec. 30, 1939, and signed by N. H. Jones, Secy.: "The Golden Consolidated Mines Company was liquidated several years ago. Kittimac Mines Company.
Incorporated in Wyoming in 1914 as successor to a company of the same name incorporated in Arizona. The property was transferred to a Colorado corporation in 1916—the Kittimac Mining & Milling Company. The company had property at Silverton, San Juan Co., Col. The last report was that the property was never a commercial success. Mr. William A. Way, an attorney, located at Silverton, Col., informed us as follows on Dec. 20, 1940: "Your letter addressed to Herbert E. Curran, former receiver of the Kittimac Mines Company, has been handed to me for answer, as I had the misfortune to be appointed the successor of Mr. Curran. In reply, I will say that I consider the stock you mention as absolutely worthless. I do not imagine it will ever be possible to obtain enough money to pay the expenses of the receivership. My work has been without profit, and there has been plenty of work. Most of the Kittimac property was unpatented and there was no money to keep up the annual labor, and therefore adverse locations have been made, and naturally what mine and mill machinery there is left is obsolete and of little or no value. I have kept the receivership open in the hope that possibly some combination might be worked out that would result in a little money being paid in to the receivership, but there is little ground for the hope now."

Champion Lease Syndicate, c/o Jesse Simmons, Trustee, Cripple Creek, Col.
Property: Morning Star and Empire Lee Leases, Cripple Creek, Col. The Trustee reported as follows on May 17, 1940:

Champion Lease Syndicate is engaged in the development of leases at Cripple Creek, Col. It is capitalized for $30,000 in units of a par value of one cent each, at which price the syndicate is selling its units to secure funds for development of the property.

Since these units are very closely held among a comparatively small number of people, we do not know of any being offered on the market nor of any market established in them. There is no stock exchange in this city.

We most assuredly feel that these units are worth par, and have a prospective value of possibly several times that figure.

Champion Mines Co., 1824 Curtis St., Denver, Col.
Jesse Simmons, Pres., 1824 Curtis, Denver, Col. Owing to the death of the Secy.-Treas., there is at this time (May 7, 1941) a vacancy in those offices.

Incorporated: Idaho.
Mr. A. H. Featherstone, president of the company, located at Wallace, Idaho, informed us as follows on Nov. 5, 1940: "Replying to your letter of the 31st ult., re Black Rock Reduction Company. The company is a recent corporation organized under the laws of Idaho in 1940. It has an exceptionally large tonnage of ore from which high gold values are being extracted in the laboratory. Work is now being done to develop a method for the commercial treatment of the rock. I shall not undertake to place a value on the stock. Its potential value is high indeed. Perhaps C. A. Quire, S. 175 Howard St., Spokane, Wash., could give you some information on market value if that is what you are interested in."

Conqueror Zinc Companies.
Incorporated in Missouri in 1903, as a consolidation of the mining companies and properties formerly owned by William Houk of Joplin, Mo. The property consisted of 570 acres of zinc lands in Newton and Jasper Cos., Mo. The report filed in 1940, shows the following: Pres., J. G. Starr, Joplin, Mo.; Secy., E. A. Ellis, Joplin, Mo.; Treas., J. W. Maret, Joplin, Mo. The Conqueror Trust Company of Joplin, Mo., informed us on Feb. 1, 1940, that the stock has no market value. Aside from a cash balance which is being rapidly depleted by payment of taxes, the only assets of the corporation consist of two tracts of rough unimproved land near Joplin from which no income is being derived and on which the possibilities of sale for any substantial figure are not promising. A dissolution of the corporation will be recommended, but the stock is so widely scattered that any concerted action between stockholders would be difficult to obtain.

Electrolytic copper refinery: Tank room, 4 crane bays, 260 tanks each, 1,530 total, including 90 starting sheet tanks, 7 10-ton Whiting traveling electric cranes, capacity operation requires 6 motor-generator sets, each delivering 6,000 amperes at 200 volts, producing 875,000 lbs. cathodes per day, 26 to 27 million lbs. per month.

Furnace refinery: 3 reverberatory furnaces, natural-gas fired. Equipment for each furnace: Stirling waste-heat boiler, 400 h.p. Wellman-Seaver-Morgan charging crane for 3 furnaces. Clark-type casting wheel, mould presses, etc. Product: Copper bars, cakes, ingots, etc. 99.955% pure. Rolling mills: 2 rod mills, consisting of bar-heating furnace, roughing, intermediate, and finishing mills, coilers, roll lathes, etc.

Wire drawing machinery: Consists of wire drawing and stranding machines for making wire and cable. Flat rolls and twisting machines for making copper ribbon core used in hollow cable. Drawing machines have range from 5/16 in. rod to number 12 wire. Plant also includes burlapping machines.

Copper plant substation: 7 motor-generator sets, each consisting of one 1,730 h.p., 6,600 volt motor, driving two 600-k.w., 200-volt, 3000-ampere generators. Three motor-generator sets, each consisting of 450 h.p., 6,600-volt motors, driving a 550-volt, 300-k.w., D. C. generator for power to operate cranes, locomotive, and hoists through entire works. Two 1,500-k.w. banks of three transformers stepping down from 6,600 volts to 2,200 volts for industrial motors. Total capacity, 13,000-k.w. (17,450 h.p.). Additional substation is located at rolling mill. Approximately 1,000 motors in service. Total connected motor load 102,000 h.p.

Zinc plant: Process: Roasting, leaching, electrolyzing, and casting. Plant capacity: 335 tons cathode zinc per 24 hours, 20,000,000 lb. per month.

Roasting division: 14 Anaconda-type Wedge-MacDougal 7-hearth mechanical roasting furnaces, natural-gas fired. Product: Calcine for leaching plant.

Leaching division: Pachuca tanks, Dorr classifier and thickeners, Oliver and Moore filters, driers, American filter presses.

Electrolyzing division: 8 units, 144 cells each, total 1,152 cells. Product: Zinc cathodes.

Casting division: Melting furnaces, casting 50 lb. slabs "Anaconda Electric" zinc. 99.995% zinc.

Zinc plant substation: 110,000-volt power stepped down through nine 6,100-kva., 3-phase, 60-cycle transformers to 406 volts, which supply 5,800 k.w. converters; current changed from A. C. current to 580-volt D. C. for electrolytic zinc plant. 110,000 and 6,6000-volt power stepped down to 2,200 volts for distribution to motors. Total capacity, 60,500-kva. (81,100 h.p.).

Electric power: Two 110,000-volt transmission lines from Rainbow and Great Falls stations and four 6,600-volt transmission lines from the Black Eagle stations (Montana Power Co.).

Electric tramming system: 9 miles standard gauge track connecting with Great Northern Railway.

Motive power: One 40-ton motor, four 25-ton General Electric motors, one 15-ton motor, two 10-ton motors, third-rail, 500-volt, D. C. system. 22 bottom-dump steel cars, 300-cu. ft. capacity.

Steam generating plants: Four boiler plants, 15 Stirling and Heine waste-heat boilers, combined rating 5,600 boiler-horsepower.

Water supply: From Missouri River, low and high pressure systems. 1,000,000-gallon concrete reservoir, fire and service lines. About 10,000,000 gallons of water are pumped each 24 hours.

Miscellaneous: Plant is equipped with laboratory, four emergency hospitals, ambulances, emergency outfits, change houses, Company Club house, 9 hole golf course, tennis courts, etc.

Deer Lodge County

Anaconda Copper Mining Company (Deer Lodge Co., Mont); **Washoe Reduction Works,** Anaconda, Mont. (For corporation officials and capital structure, see Silver Bow Co.) A. E. Wiggin, Mgr., Great Falls; W. E. Mitchell, Gen. Supt.; C. A. Lemmon, Asst. Gen. Supt.
Copper plant: (Process: concentration, roasting, reverberatory smelting, converting, and casting.) 40-ft. rotary car dumper, belt conveyors, gyratory crushers, Symons cone crusher, crushed ore (1 in. size). Concentration: 8 sections, capacity of each section is 1,600 tons of ore per 24 hours; conveyors, elevators, trommels, crushing rolls, classifiers, Hardinge ball mills, selective-flotation machines, Dorr thickeners, Oliver filters. Crude ore, 4 to 6% copper; concentrate, 24 to 27% copper, 27 to 32% sulphur, 10% water. Tailings 0.25 to 0.35% copper. Recovery: 95% copper; rejects 70% iron and over 95% silica. Roasting division: 7-hearth, 25-ft., mechanical roasting furnaces, natural-gas fired, capacity 175 tons (dry) per 24 hours. Sulphur reduced 15 to 20%. Product: Calcine for reverberatories. Reverberatory smelting: 6 furnaces, 23 ft. wide, 134 ft. long (inside), capacity about 800 tons solid charge per day, natural-gas fired. Waste-heat boilers. Matte tapped into 14-ton ladles. Converting: 7 20-ft. Great Falls-type converters, 3 overhead traveling cranes. Product: 98% blister copper.
Casting at Anaconda: 3 furnaces each 200-ton capacity, copper, carrying gold and silver, cast into 730-lb. anodes, which are shipped to Great Falls Reduction Works.
Zinc Plant: (Process: Concentrating, roasting, leaching, electrolyzing, and casting.) Concentrator: Capacity, 1,500 tons ore per 24 hours. Blake crushers, rolls, Hardinge ball mills, collective and selective-flotation machines, Dorr thickeners, Oliver filters. Product: Zinc concentrates, lead concentrates (shipped to East Helena). Roasting division: 14 Wedge-McDougal, 7-hearth, mechanical roasting furnaces, natural-gas fired. Product: Calcine for leaching. Leaching division: 9 Pachuca tanks, Dorr classifiers and thickeners, Moore and Oliver filters, Ruggles-Cole driers, Shiver filter presses. Product: Clear filtrate (electrolyte) for electrolysis. Lead-silver residues shipped to East Helena. Electrolytic division: 2 800-ton storage tanks, 576 electrolytic cells (4 units, 144 cells each). Motor generator set for each unit, lead anodes, aluminum cathodes. Product: Zinc cathode sheets. Acid solution back to leaching division. Casting division: 2 melting furnaces. Product: Zinc slabs, bars, etc., 99.9% pure. In addition to the copper and zinc departments, the Anaconda plant manufactures sulphuric acid, "Anaconda Treble Superphosphate," white arsenic, and "Anaconda Wood Preservative," operates foundries, brick plant, limerock quarry, etc.
Sulphuric acid plant: Raw material, dried pyrite concentrate. Dust separators, Glover towers, Gay-Lussac towers, acid chambers, and brick-packed towers. Capacity: 225 tons 60 deg. B. acid per day, some sold for commercial purposes, balance to phosphate plant.
Phosphate plant: Raw material, phosphate rock from Conda, Idaho. MacDougal furnaces (calcining), agitators, Dorr thickeners, and filters. Swenson evaporators concentrating to 53% avail-

able phosphoric acid, about 3 times as much as ordinary acid phosphate. Pratt mixers, cranes, driers, bagging machines. Capacity: 225 tons per day of phosphate rock, 150 tons per day Treble Superphosphate, requiring about 180 tons per day 60 deg. B. sulphuric acid.

Arsenic plant: Smelter gases are passed through electric dust precipitators before entering main chimney. Chimney: 75 ft. in diameter at bottom, 60 ft. in diameter at top, 585 ft. high, capacity, 3 to 4 million cu. ft. of gas per minute, the largest in the world.

Main dust-treating plant: 20 box-type units, vertical flue plates, and wires carrying static charge of electricity at 62,500 volts. Product: Dust, 45% arsenic oxide. MacDougal roaster, condensing flues, small reverberatory furnace, 3 lines of brick arsensic "Kitchens", barrelling machines. Final Product: "Anaconda Prime White Arsenic", 99% plus arsenic oxide.

Anaconda wood preservative: Arsenical flue dust, Irish moss, and water made up into paste; applied to fence posts, telegraph and telephone poles, etc.

Brick plant: Makes all silica, fire clay and common brick used at Washoe; silica and fire clay brick used at Great Falls and silica brick used at International Smelting and Refining Company, (wholly owned subsidiary), at Tooele, Utah. Silica brick are made on Boyd brick press; fire clay and common brick on stiff mud machine. Other equipment: 4 round, gas-fired, down-draft kilns, and one 26-chamber, semi-continuous Oregon kiln. Plant capacity, 40,000 common bricks per day and 240,000, 9-inch equivalent, silica ore, fire clay bricks per month.

Remarks: Company also operating in Cascade, Flathead, Lewis & Clark, Madison and Silver Bow Cos., which see. 2,200 men employed at Anaconda. Company owns Southern Cross Mine, in this county, which see.

The County Assessor of Granite Co., Philipsburg, Mont., informed us on Oct. 26, 1940, that the property formerly owned by this company was transferred to the Forest Rose Mining Company, c/o J. W. Cox, New Castle, Pa. The property consisted of 7 patented claims, one mill and other buildings, the assessment on which is $3,690. Mr. J. W. Cox informed us as follows on Nov. 4, 1940: "In 1927, the property was sold by the sheriff. A number of stockholders raised money enough to redeem the property and took out a charter in the name of the Forest Rose Mining Co. I often think that we made a mistake in redeeming it as we have been putting more money into it and at present are paying interest on more than a $1,000 borrowed to open up the tunnels, etc. We do not have any assurance that we will ever get anything out of it." It would appear that the old stock is without value.

Product mined: Copper ores average 4 to 6% copper and 2.0 to 2.5 oz. silver. Zinc ores average 10 to 14% zinc, 5.0 to 8.0 oz. silver and 2.0% lead. Manganese ores, see Butte Copper & Zinc Company.

Zonal arrangement of ore bodies: 1. Central zone (two by three miles) copper ores. Chalcocite, bornite, enargite, chalcopyrite with pyrite and small amounts of sphalerite near the edges. 2. Intermediate zone (surrounding the central zone) zinc ores with a decrease in copper content and an increase in silver, lead and manganese. 3. Outer zone. Quartz and manganese with some sphalerite and galena. Gangue in all zones is mostly quartz and pyrite with altered granite.

Operations: Properties opened by 18 main hoisting shafts, 20 auxiliary and air shafts. Maximum shaft depth 4,200 ft. Underground development, including drifts, crosscuts, laterals, raises and winzes, approximately 1,300 miles.

Present Production: 9,500 tons of copper ore, and 1,250 tons of zinc ore per day.

Past Production: The value of the metal production of Silver Bow County from 1882 to 1938, inclusive was $2,305,934,032, of which it is believed that not more than $150,000,000 was produced from properties other than those now owned by the Anaconda Copper Mining Company.

Transportation: Company owns Butte Anaconda and Pacific Railway, electrically operated, between Butte and Anaconda, 26 miles. H. A. Gallwey, Gen. Mgr.

Power: Electric power from Montana Power Company, 3-phase 60-cycle 50,000 to 100,000 volts received at three substations and stepped down to 2,400 volts, thence distributed to the mines. Larger motors and hoists operate at 2,200 volts, smaller motors and lighting at 440, 220, and 110 volts.

Compressors: 27 motor-driven 2-stage compressors, capacity 200,000 cu. ft. free air per minute at 90 lb. gauge; 8 additional compressors, capacity 400 to 1,200 cu. ft. each, supply air to mines through pipe line system for mining and hoisting.

Hoists: 26 mining shafts equipped with duplex double-drum and single-drum hoists, operated by electricity and compressed air.

Pumps: All underground water drained into central pumping plants on 1,200-ft., 2,200-ft., 2,800-ft. levels in one mine, and 1,200-ft., 2,800-ft. levels of another mine. 23 Anaconda-type vertical quintuplex motor driven pumps. 10 motor-driven 600 G.P.M.-1,200 ft. lift, centrifugal pumps.

Ventilation: Natural downcast-upcast through shafts for main passageways; exhaust and pressure fans and blowers for drifts and stopes. Large fans are reversible, 5½ to 10 ft. in diameter, motor driven, 75- to 750-h.p. Several hundred blower fans, 3½- to 20-h.p.; 3 air-conditioning units 175,000 cu. ft. per minute capacity.

Electric Mine Signals: A. C. station bells operated from power service; D. C. shaft bells operated by storage batteries; station "buzzers" supplement main signals. Mine signal system is reliable, safe, simple, and easy to repair. Telephones on practically all mine levels.

Electric Locomotives: 18- and 20-inch gauge, storage battery type, weight, 1½ and 7 tons; trains travel about 5 miles per hour.

Lighting: Electric at stations and in many drifts; power furnished by 110 and 220 volt 3-wire system. Rubber-covered, lead jacketed cables. Edison cap lamps for employees.

Electric Hoists: Main hoists, 12-ft. diameter, 93-in. face, wind, 5,550 ft. 1⅞ in. steel cable in 3 layers, capacity 7 tons ore at 2,250 ft. per minute; operated by motor-generator set, and Ward-Leonard control; 1,100 tons ore from lower levels in 8 hours. Auxiliary hoists, 8-ft. diameter, 102-in. face, wind 5,400 ft. of 1⅜ in. rope; capacity of 8 tons at 1,500 ft. per minute, operated by motor-generator set, and Ward-Leonard control.

Sampler: Washoe Sampler for custom ores. L. R. Margetts, Mgr.

Remarks: As of January 1, 1940, company employed 6,450 men in Butte. For details on other Anaconda properties and reduction plants in Montana, see Cascade. Deer Lodge, Flathead, Lewis & Clark and Madison Cos.

Anderson Mining Company, Butte, Mont.

Property: 1 patented claim, Butte District, Silver Bow Co., Mont.

Ardsley Butte Corporation (Silver Bow Co., Mont.).

History: Incorporated in November, 1929 in South Dakota by L. O. Goodman, formerly of Butte, Mont.

Capital: 7,500,000 shares, par $1. The name of the company was changed to Butte Mines Holding Company in 1931. By exchanging its stock for stock of other companies on various bases, the Holding Company acquired, according to last records available, 600,000 shares of stock of the Butte Copper Consolidated Mines, and over 1,000,000 shares of stock of the Ardsley Butte Mines Corporation. The Holding Company does not hold any mineral lands so far as known. T. Tomich, 116 West Park St., Butte, Mont., was agent for the Holding Company.

Ardsley Butte Extension Mining Company, c/o Thos. P. Cates, Pres., Butte, Mont. Chas. J. Stone, Al. Hultman, Thos. J. Davis, all of Butte, Directors.

Incorporated: Montana, June 2, 1928.

Capital: 1,000,000 shares, par $1. 570,000 shares outstanding according to last available records.

Property: Gold stream, patented claim, 18 acres, Independent District near Butte, Silver Bow Co., Mont. Claim adjoins east side of Highland claim of Ardsley Butte Mines Corporation.

Operations: Property opened by 250 ft. shaft with levels at 150 ft. and 250 ft. 1,500 ft. of additional underground work. "In 1928 produced over 5,000 tons of gold, silver, lead, zinc, copper ore." Main values in silver.

Equipment: Electric power. Hoist and compressor.

Remarks: Not operating, but when operating employs 42 men.

Ardsley Butte Mines Corporation, c/o T. Tomich, 116 W. Park St., Butte, Mont., formerly agent.

Incorporated: South Dakota, July 1, 1926.

Capital: 2,500,000 shares; par $1; all outstanding.

History: This company took over the property of the bankrupt Butte Elk Park Extension Mining Company.

Property: 1,000 acres, of which 600 are patented, at Elk Park, twelve miles north of Butte in Jefferson Co.; and the Agnes-Highland group, 134 acres patented, southwest of Butte in the Summit Valley and Independence districts, Silver Bow Co., Mont.

We received a letter from the county treasurer, Boulder, Mont., that the taxes on mining claims amounting to $472.67 since 1931 and taxes on lands amounting to $71.55 since 1935 have not been paid, and that the county will take tax deed to mining claims sometime this year (1938). Our records also indicate that the company owned the Agnes Mine, Highland district, Silver Bow Co., Mont.

Operations: The Elk Park properties are opened by two shafts, 250 and 600 ft. deep with 500 ft. of drifts. No commercial ore was found there and the company confined its efforts to operating through a 500 ft. shaft on the Highland claim and a shallow shaft on the Agnes claim in Butte.

Equipment: Electric power, hoist and large compressor.

Remarks: The company at one time was the second largest producer of silver in Montana. "Property sold to satisfy debts in 1938."

Best Hope Mine. Owner: Oskar Karri, 35 E. Broadway, Butte, Mont.

Property: Best Hope group, 1 patented and 12 unpatented claims, 165 acres, 3 miles south of Rocker, Silver Bow Co., Mont. Lead, zinc, copper, gold, silver, manganese ore.

Development: Two 45 ft. shafts and 200 ft. of crosscuts. Assessment work only in 1939.

History: This company erected a floating gold placer dredge in the western portion of Butte, Silver Bow Co., Mont. Has not been active for many years, and no record of corporation officers.

Butte & Bacorn Copper Company, c/o Harry C. Bacorn, Mueller Apartments, Butte, Mont.
History: The Butte & Bacorn Copper Company was organized in 1906, to develop mineral ground in the north Butte district. The company spent a large amount of money on equipment and development work, sinking three shafts of 300 ft., 860 ft. and 1,000 ft., together with considerable drifting. Lack of funds, due to the 1907 panic, caused a cessation of operations in 1908. The company was reorganized in 1916 and operations resumed by a new company, the Great Butte Copper Company. The shaft was deepened to 2,000 ft. and drifts and crosscuts were driven; copper ore was encountered but not in commercial qualities. Development work was then suspended, equipment removed, and the property taken over by eastern bondholders.

Butte Copper Czar Mining Company, 514 Silver Bow Bldg., Butte, Mont. T. Tomich, Pres.; Otto Stroh, V.-Pres.; John K. Claxton, Secy.-Treas., all of Butte.
Incorporated: Montana, 1918.

Property: Copper Czar patented claim in sec. 15, 3 N., 7 W., about 12.65 acres in the eastern portion of the Butte district, Silver Bow Co., Mont. Copper ore with small amounts of gold and silver.
Development: Property opened by shaft with drifts and crosscuts.
Equipment: Electric power available.
Remarks: When company operates it employs 20 to 40 men.

Butte Copper and Zinc Company, 50 Broad St., New York City, and c/o Samuel Barker Jr., Butte, Mont. A. A. Shelare, Pres.; A. L. Bailey, V.-Pres.-Treas.; M. F. McDonald, Secy.-Asst. Treas., all of New York City. Samuel Barker, Jr., Consulting Engineer. J. P. Ryan, Foreman.
Incorporated: Maine, November 22, 1904.
Capital: 600,000 shares; par $5; all issued.
Stock listed: New York Stock Exchange. Transfer Agent, Bankers Trust Co., 14 Wall St., New York City.
History: The property is operated under a profit sharing lease, by the Anaconda Copper Mining Company.
Property: Emma Mine group, 8 patented, 3 unpatented claims, about 112 acres, in the center of Butte, Silver Bow Co., Mont.
Operations: Main shaft is 1,600 ft. deep and a winze has been sunk from the 1,600 ft. level to the 2,100 ft. level. Extensive underground workings on the veins on the different levels. Square-set stoping. Produces about 500 tons per day of lead, zinc, silver ore and manganese ore.
Ore bodies: Company has opened very extensive zinc, lead, silver ore bodies, the ore being shipped to the concentrator at Anaconda. The company has the largest bodies of developed pink manganse (Rhodochrosite) ore in the world, which assay from 20% to 40% manganese. A process has been developed by the Anaconda Copper Mining Company, whereby the manganese ore can be concentrated (recovering the lead, zinc and silver) obtaining a high-grade manganese concentrate. The concentrate can be roasted, giving a product assaying as high as 62% manganese.
Equipment: Double drum steam hoist to 1,600 ft. level. Double drum electric hoist, 1,000 ft. capacity, below 1,600 ft. level. Electric compressors and electric locomotives. Steam boiler plant.
Remarks: Employs 325 men.

Butte-Detroit Copper & Zinc Company, Silver Bow Co., Mont. Agent: Ralph A. Gallagher, 50 Congress St., Boston, Mass.
Incorporated: Delaware, March 7, 1916.
Capital: 2,500,000 shares; par $1.00; all outstanding.
History: Company purchased a 51% interest in the Butte Central Mining & Milling Company, and during the war produced manganese from its Ophir Mine about 1 mile south of the center of Butte. Property opened by shaft 1,040 ft. deep. Operated a custom manganese mill during the World War and was affiliated with the United States Manganese Corporation, which is defunct. Its properties were sold in 1918 to satisfy a judgment, and were bought at sheriff's sale by the Butte Copper & Zinc Company, which see.

"Denver Mining Record" April 20, 1940. Goldfield, Nev.—Additional information from the Ohio Mines Corp. at Goldpoint, south of here, brings the news that the recent new strike is developing into a rich discovery. The find was made in the Orleans Townsite section of the Ohio property. The raise on the 300 has now reached a height of 125 ft. and the crosscut on the 400 is just entering the downward extension of the shoot. While the values at times run as high as $75, the ore as broken between walls is said to average close to $12. Otto Dieckman is Gen. Mgr., of the company with offices at the mill and mine in Goldpoint. Main offices are in Ohio. The company operates a custom flotation mill in addition to operating its own mine properties. About 30 men are employed.

Yerington Mountain Copper Co.
Incorporated in Nevada in 1912, and was located at Golconda, Nev. The company held 46 claims, 920 acres in the Mountain View Dist., Humboldt Co., Nev. Work was suspended Feb., 1918, due to a heavy flow of water into the mine. The Tax Assessor of Humboldt Co., Winnemucca, Nev., informed us on Feb. 3, 1941, that the patented claims formerly owned by this company are now in possession of N. H. Getchell and Geo. Wingfield of 206 N. Virginia St., Reno, Nev. It would therefore appear that when the company lost its claims it went out of business. Our records indicate that the company went out of business in 1919. The shares, in our opinion, have no value.

Gold Hill Mines, Inc., c/o Hans Jensen, Secy., Tonopah, Nev.; Fred L. Cole, Pres., 1230 S. Oakland Ave., Pasadena, Cal.

Incorporated: Delaware, Jan. 4, 1934.

Mr. Jensen informed us as follows on Feb. 18, 1941: "Replying to your letter of the 10th, inst., the Gold Hill Mine was operated during 1940 by Messrs. Morrin and Steigmeyer, of Round Mountain, Nev., under an option to purchase agreement entered into with the company on April 1, 1940. Under this agreement, they are to pay a total of $300,000.00 for the property, payments being made from production at the rate of 10% on all mint or smelter returns.

"The property was active until the first of the year when severe winter weather forced a shutdown of the mill. However, the mill will be in operation again shortly. The company received enough revenue from these operations to enable it to take care of some of its indebtedness.

"Regarding the value of the stock we are unable to say as there has been no sales that we know of and the stock is not listed."

Mizpah Extension Company.

Formed a number of years ago to develop a number of mining claims at Tonopah, Nye Co., Nev., adjoining the Tonopah Mining and Tonopah Belmont properties. Property has not been worked for several years, there is no market for the stock and its value problematical. Last quotation was in Aug., 1928, at which time 100 shares were offered at 54c, with no bids. Mr. M. A. Channell, 116 Wellington Rd., Stonehurst, Upper Darby, Pa., is familiar with the company. Denis Henault
Deadwood, S. D.

My dear Mr. Henault:

In reply to your letter of November 14, with which you sent a group of specimens for examination:

The specimens are as follows:

No. 1 is one of the tungsten minerals, apparently ferberite (iron tungstate) in quartz with a little arsenoparite. No. 2 is a quartz cericite schist with limonite (iron oxide carrying water) formed from pyrite. No. 3 is a quartz vein lined with tiny crystals of quartz and very small crystals of ferberite. They look very much like ferberite from the Boulder district. No. 4 is quartz (silicified country rock) carrying some lead, such material might carry gold and silver but as the bureau makes no commercial assays I cannot tell whether it does or not. No. 5 is a piece of silicified lava of some sort along a crack of which is a little hubnerite (manganese tungstale) and tiny grains of pyrite. No. 6 is very much like No. 9. This specimen might also carry precious metals. No. 7 is trachite with limonite (hydrous oxide) made by weathering of pyrite. No. 8 is like No. 3 but does not contain so much ferberite. No. 9 is a quartz mica schist with a little graphite and stained yellow and brown by iron quide. No. 10 is very much like Nos. 8 and 3 but no ferberite was found in it. It might well carry precious metal.

I enclose another tag and when it is convenient you might send me even the little pieces of uraninite. It may be that we can do something with them even though they are small.

Cordially,
Frank L. Hess,
Principal mineralogist.

Product mined: Only ores for sampling.

Type of deposit: The ore occurs in a layer of cummingtonite-bearing schist of pre-Cambrian age, called the Homestake formation, which is traceable for many miles. The orebodies lie along a group of minor folds forming a large complex anticline. Each orebody follows its own specific fold, and all—except the Caledonia orebody—dip steeply to the northeast and plunge at about 35 or 40 deg. to the southeast with the prevailing structure.
Product mined: Gold, containing a little silver. The Homestake Mining Company also mines coal in Wyoming. Tungsten ore has been mined by the Homestake Mining Company, but from different ore deposits.
Development: Three vertical shafts are at present in use at the Homestake Mine. These are the B. & M. No. 2 shaft, the Ellison shaft and the new Ross shaft. Mining operations are now conducted on 25 different levels from the 600-ft level to the 4,100-ft. level.
Mining: The mine is divided into pillars and chambers which are mined by different methods. The chambers are mined by shrinkage stoping, leaving 25-ft. crowns. After the ore has been completely drawn from the shrinkage stopes, they are filled. The pillars and crowns are mined by the square-set method, and the square-sets are filled.
Equipment: Mine Plant: The compressor plant comprises 4 two-stage compressors supplying air for rock drills, and 2 four-stage compressors supplying air for haulage; 25 compressed air locomotives of 3½ to 14 tons; 2 storage battery locomotives; 85 automobile trucks, tractors, and cars; side-dump and end-dump cars of 20 cu. ft. capacity; about 500 rock drills; 2 cylindrical-drum electric hoists at Ellison shaft, 2 bicylindro-conical-drum electric hoists at Ross shaft, and steam hoists in reserve at B. & M. shaft; 2 electrical centrifugal ventilating fans on surface, and supplementary fans underground; electric centrifugal pumps; electric lighting and signalling; battery miners lamps and charging equipment; drill sharpening shop, machine shops, blacksmith shop, foundry and pattern shop; office, change rooms, telephone exchange, mine rescue and first aid equipment and rooms. Mills: Four mills are at present in operation. The South Mill, of 180 stamps, Cyanide Plants Nos. 1 and 3, and the Deadwood Slime Plant. These mills have a

capacity of about 4,000 tons per day. Power: Power for the mine and mills is supplied by hydro-electric plants at Spearfish and Englewood, and the new steam-electric plant at Kirk.
Employees: Over 2,000.
Production: During the year 1935, 1,379,163 tons of ore were milled, realizing an average of $13.91497 per ton; the bullion reduced being $19,191,013.19. The total bullion production of the Homestake Mine to December 31, 1935, was $301,019,015.00.
Dividends: During 1935, $14,064,960 was paid in dividends. The total dividends paid to December 31, 1935, were $88,020,442.00.
Ore reserves: On December 31, 1935, there were 14,918,132 tons of ore reserves, including 205,441 tons of broken ore in the stopes. At the present rate of milling this would last about 11 years.

Mammoth Mining Company, 504 McIntyre Bldg., Salt Lake City, Utah, and Mammoth, Utah. Samuel McIntyre, Jr., Pres.; Roy A. McIntyre, Secy.; Robert E. Mark, Dir.; Earl McIntyre, Dir. & Gen. Mgr.

History: Incorporated 1881 in Utah. Re-incorporated Dec. 5th, 1907, in Nevada. Has been a producer for over sixty years and has produced some of the richest ore in Utah, particularly in gold values. The Mammoth has been thought worked out many times, but new finds have always put it back in the dividend class.

Investments: Controls the Cleveland Mining Company, the Gold Chain Mining Company and the Opohongo Mining Company.

Capitalization and Dividend Record: Capital: $40,000, par value 10 cents; reduced 1920 from $1,-00,000. Par value $2.50; to which it was reduced on re-incorporation in 1926 from $10,000,000. Par $2.50. The stock assessment, February, 1924.

Dividends paid at the end of 1912 amounted to $2,280,000 and since they have been paid as follows: 5 cents in 1913, 5 cents in 1915, 25 cents in 1916, $1.00 in 1917, 20 cents in 1925, 60 cents in 1926, 5 cents in 1935 and 10 cents up to July 1st, 1936, 20 cents 1937, 10 cents 1938, 15 cents 1939, 10 cents up to July 1st, 1940.

Market for Securities: Listed on the Salt Lake Exchange. Price 1920, 50c-35c; 1921, 35c; 1922, 45c-25c; 1923, 35c-30c; 1924, 65c-19½c; 1925, $3.10-50c; 1926, $3.00-$2.65. The market for subsequent years can be obtained from secretary of the stock exchange.

Property: Nineteen claims in Tintic Mining District, Juab Co., adjoining the Plutus and Grand Central Mines. The Cleveland Gold Chain and Opohongo all adjoin the Mammoth property. The ores contain some bromides and chlorides and are desirable smelting ores. A marked characteristic of the ore deposits is the clean cut segregation of ores into shoots of gold ore, silver ore, and copper and lead ores. A car of ores shipped in 1907 reported to have brought $100,000, one in 1906 of 20 tons, $75,000, 30 tons in 1892, $92,000.

Development: By 2,100 ft. shaft and a winze 260 ft. to a depth of 2,360 ft. Current development has been on the 2,100 in the old quartz ore body, the product from which has been made a marketable grade by the increased price of gold. An odd fact is, that during 1917-1918 when copper was high, a nice copper ore body was found and mined. In 1925-1926 a lead-silver ore body was discovered and sold on a good lead-silver market. Currently with gold higher priced the old Mammoth is delivering a gold ore that is paying dividends.

Equipment: All new and modern and is steam driven.

Production: About $15,950,000.00 of which $3,-432,742.70 has been paid in dividends to July 1st, 1940.

Character of ore: Oxidized, with some bromides and chlorides.

Under letter dated January 16, 1939, you were advised that unless modification of the terms of the Lease and Contract of Purchase dated March 16, 1936 was obtained, the company would lose its Lease. Our efforts were unavailing and as of April 21, 1939 the company was relieved of its properties and its rights under the contract of March 16, 1936 and supplemental contracts through forfeiture. Said forfeiture occurred because the company was financially unable to continue the fulfillment of the terms of its contract. While a dissolution of the company contemplated by the directors of the corporation has not yet been consummated, it may be considered that the stock of Allied Annie Laurie Gold Mines, Inc., became worthless as of April 21, 1939, since on that date, the effect of the termination of the lease became permanent and it appeared on that date that not only would there be no assets whatsoever remaining to be distributed to the stockholders but the company had a substantial amount of prior outstanding obligations which could not possibly be met. The property formerly owned was located in the Gold Mountain Mining District, Piute Co., Utah. (Silicious gold and silver).

There have been six assessments of 1c each levied on the stock of Alta United Mines Company to date hereof.

If all assessments including No. 6 have been paid on the stock you refer to, then the following:

The stock of the Alta United Mines Company is not listed on any exchange as yet, and probably will not be until the company gets on a regular production basis. The stock has been inactive on the over-the-counter market. What few transactions there have been in this stock over a period of several years, and including Oct. 19, 1940, were at 5c per share. It is my opinion that 5c per share is a fair value of the stock, 2/12/41.

Lark Unit

The Lark Unit of the United States Smelting, Refining and Mining Company is situated on the eastern slope of the Oquirrh Range of mountains in the West Mountain mining district, Salt Lake County, Utah. This property is operated through the Mascotte Tunnel, a main haulage tunnel, with its portal at the Town of Lark, Utah. The tunnel is approximately 3 miles in length and is equipped with an electric haulage and block signaling system. The tunnel is connected with surface by 6 incline shafts sunk on the dip of the veins from surface. These inclines vary from 1,000 to 2,200 ft. in length and are so located as to provide exceptional natural ventilation throughout the mine workings above this tunnel level. Developments below the tunnel level have been extended down to the 1200 level on the dip of the vein below the Mascotte Tunnel level. This 1200 level has been extended for approximately 2 miles. At intervals it is connected with the Mascotte Tunnel above by incline shafts, 5 in number, and one vertical 3-compartment shaft 500 ft. in depth which connects with the 1200 level by a cross cut. The ore produced below the Mascotte Tunnel is all handled through these various inclines and vertical shaft which is also used as a pumping shaft. These different shafts below, are connected by crosscuts and drifts and thus provide natural ventilation condition. The property employs approximately 350 men and produces approximately 700 tons of ore per mine working day—operations being on a 40-hour, 6-day week basis. At the portal of the Mascotte Tunnel in the Town of Lark are the shops, mine buildings and ore bins, which are connected by a spur track with the main D. & R. G. W. R. R., Bingham branch line. The Lark townsite is on company property and a large number of the employees own their homes; also, the company has a number of houses which they rent to the employees. The population at Lark approximates 500. A number of the employees live in the Salt Lake Valley and drive back and forth to their work.

Other properties owned or controlled by United States Smelting, Refining and Mining Company in operation are: Centennial-Eureka, Bullion-Beck, Victoria and Eagle and Blue Bell, in Tintic district under leasing system.

The Park City Unit near Keetley in the Park City District is under development.

The Hidden Treasure Mine, nine and one-half miles southeast of Stockton, Utah, in the Ophir Mining District, was acquired in 1938 by purchase. After building of modern camp and facilities and installation of 5,000 pound double-drum hoist, property is under small production and development.

U. S. Mine

The U. S. Mine in the West Mountain Mining District embraces such old well-known properties as Galena, Old Jordan, Telegraph, Spanish, Niagara Mining Company, etc. Also, it has under lease the extensive area of the Utah Metal and Tunnel Company and the Bingham Metals Company.

Main entry to property at Copperfield above Bingham, via tunnel to main Niagara Shaft. This shaft of three compartments has levels every 200 ft. with present depth 2800. Serviced by Nordberg double-drum electric hoist having 8 ft. diameter, drums, 9 ft. face, capable of holding enough 1¼ inch cable on two layers for 4000 ft. Electric motors of 350 h.p. All latest safety electric devices for hoist control. Hoist housed in arched, concrete, steel reinforced room, 35 ft. width by 65 ft. length by 17½ ft. height. Cages and skips in all, except structural phases where more strength is needed, made of duraluminum which considerably lightens dead load. Skips are self-dumping above main level into ore pockets. From levels, ore or waste is dumped into pockets and then drawn into skips by measured pocket through air operated gates.

Main haulage is by 8-ton cars drawn by and with an 8-ton H.K. Porter high pressure air locomotive. Other level haulage being by 2-ton cars drawn by 3½-ton storage battery locomotives.

Ore occurrence in limestone measures, quartzites, and porphyries, either on fissure or on strike beddings. Drifts and crosscuts first run out, then raising to level above is further cut by sublevels to next raises. Then starting with upper panel stope to level, worked stope area is waste filled and work can be started on adjoining or lower panel. Timbering is modified square sets, using cap of full length except for butt cap from hanging to footwall. Posts and collar braces of standard length.

At portal of tunnel modern dry house servicing 500 men is so constructed that employees do not have to go out of doors after donning working clothes. Ten-man steel housed cars transport men into and out of mine.

A 100-man hotel owned by the Company but operated by lessee gives excellent accommodations at minimum charge.

Complete substation electric plant, machine, wood and blacksmith shops, are near portal, as is the steam power plant of four 150-h.p. boilers, steam driven low air compressor and high pressure air compressors.

Safety is a main endeavor at property and all supervision, including a trained safety man, make this their first order of business. A 50,000 cu. ft. fan at 7-inch water pressure over the Old Jordan Shaft exhausts used airs to the surface.

Property is 100% first-aid trained. Hard hats and goggles are a requirement.

Property works six days per week—employees are on a forty hour basis. Approximately 400 men working with average tonnage 600 tons per day and 2000 ft. of development work per month.

The mine is located at Bingham, Utah, comprising 2,381 acres of patented mining claims, about 648 acres of which consist of the mining and stripping area. Mining is done by the open-cut method, electric shovels, with dipper capacities of 4½ and 5 yards, loading ore into 80 and 100 ton capacity railroad cars. Seventy-five ton electric locomotives haul the ore trains, of about 12 cars each, to the main assembly yards where trains of 50 cars are made up and moved by Mallet locomotives over the tracks of the Bingham and Garfield Railway to the concentrating plants at Magna and Arthur, a distance of 20 miles. The waste material overlying the ore body is disposed of in gulches in the mining area.

The concentrating plants at Magna and Arthur, employing flotation concentration, have a combined milling capacity of more than 70,000 tons of ore per day. At these plants about 36 tons of ore, averaging less than 1 per cent copper, is concentrated to one ton containing 33 per cent copper. The concentrate is treated at the Garfield Smelter of the American Smelting and Refining Company and the smelter product, blister copper, is refined at Atlantic and Pacific seaboard refineries.

Production: Total cu. yds of material (ore and waste) moved to December 31, 1939, 308,747,412. Total tons ore mined and milled to date, 295,648,574. Maximum daily tonnage milled, 80,100. Maximum daily ore tonnage mined, 80,177; Maximum daily tonnage (ore and waste) moved at mine, 178,432; Net ounces gold produced to date, 2,016,524; Net ounces silver produced to date, 18,385,935; Net pounds copper produced to date, 5,138,766,272.

In 1936, Utah Copper Company commenced recovery of Molybdenite from its ores. Total net pounds MoS2 produced to date, 21,538,815.

Expenditures to date: Wages, $133,500,860; power, supplies, services, etc., $188,975,325; Federal, State and County and City taxes paid, $49,382,081; Smelting, freight, refining, etc., $149,591,823.

Miscellaneous: Normal annual consumption of electricity, 375,000,000 K.W.H. Normal annual consumption of powder, 5,300,000 lbs.

Copperton

In the early days of mining in the Bingham District, the several working mines were distributed over the region in the narrow canyons with small clusters of dwellings housing the employees at each mine. With the inauguration of power shovel mining by the Utah Copper Company, it became necessary to remove all the various improvements situated within the limits of the shovel mining area, and, as there was an average covering of 115 ft. of waste capping over the 226 acres of copper-bearing porphyry, it was also necessary to locate places for disposal of this capping. The company acquired dumping rights in the many nearby gulches, leaving only the narrow confines in the bottom of the main canyons as available building sites.

The wooden shacks were replaced by two-story brick and stucco houses, but with the fast increasing number of employees, business houses greatly increased the congestion. The Utah Copper Company, realizing that housing and business facilities had progressed to the limit within the confined area, decided to establish a townsite three miles from the mine where the mouth of Bingham Canyon opens into the beautiful Salt Lake Valley. Here, employees could find excellent living conditions and a view of something other than the barren canyon slopes.

During 1926, 18 homes were built, 25 more in 1927, and the construction of new homes has continued until at present there are 189 dwellings. Eventually it is contemplated that most of the employees, except those whose work requires constant presence at the mine itself, will be housed in this model town.

In the construction of the houses, copper, the everlasting metal, was used wherever possible; copper roofs, copper screens, copper vents and downspouts, and all plumbing is of brass pipe and fittings. The use of copper increased the cost by only 4.0 per cent over the cost of the more ordinary and perishable materials.

One house built in 1937 was constructed entirely of copper wherever feasible. This house not only has copper plumbing, copper roof and guttering, copper screens and fixtures, but even the walls of the house are made of heavy copper sheeting.

The company did not stop with the building of these modern houses, but has curbed and surfaced the streets, installed water and sewage systems, laid cement sidewalks, and planted thousands of shrubs and trees. There is a baseball park and a beautiful recreation park within the townsite with grass, trees and flowers. New and modern grade and high schools, situated at Copperton, provide efficient educational facilities for the children of employees. More recently the employees' club house in Bingham has been remodeled and considerably enlarged. It provides bowling alleys, billiard tables, a large gymnasium and dance floor, and many other recreational facilities for the sole enjoyment of employees and their families.

A paved highway passes through the townsite which is only 23 miles from Salt Lake City.

In the Magna-Garfield area the company has also provided homes and recreational and educational facilities for the employees. These include a baseball park, golf course, swimming pool, club house, and a large playground, all helping to enhance the physical and mental well-being of the employees as well as their families.

The Bingham to Copperfield Vehicular Tunnel was completed early in 1939. This tunnel was driven outside of the ore body on the east side of the mine to replace the surface highway located over the ore body, preventing expansion of the lower shovel benches. The tunnel was turned over to the Salt Lake County Commissioners February 3rd, 1939, to be operated under their supervision.

Gold Mountain Mines Company.
Incorporated: In Utah and lost its charter on September 29, 1934, and has not been reinstated. Mr. Homer McCarty, located at 1871 So. 19 East, Salt Lake City, Utah, informed us on January 23, 1940, that since 1933 the company has been defunct. The company still owns the 17 or 18 patented mining claims situated in Sevier Co., Utah. The taxes on this property have been unpaid for many years. This coming May the County will sell the mining claims for the delinquent taxes, amounting to something like $500. Mr. I. A. Smoot, Secy. and Treas. of the company is located at Federal Bldg., Salt Lake City, Utah.

Marsac Mining Company.
The Marsac Mining Company was incorporated under the Laws of Utah on April 29, 1940, with a

capital of $20,000.00 divided into 2,000,000 shares of non-assessable common stock of which 1,000,000 shares are treasury stock. The officers and directors of the company are: James B. Allen, Pres. and Dir.; D. C. Coulam, V-Pres. and Dir.; Edwin G. Kidder, Secy.-Treas. and Dir.; Norman C. Hopper and Arnold M. Seiler, Directors. The company holds a lease and option to purchase from the Park Flag Mines Company, 22 patented lode mining claims situated in the Uintah Mining District near the town of Park City. The company also holds a lease and option to purchase from the International Smelting & Refining Company the Marsac patented lode mining claim situated in the Uintah Mining District near the town of Park City, also mining machinery and tools. The properties lie between the Ontario and Daly on the east and south, the Park Utah on the southeast and extend westerly to within approximately 600 ft. of the main working shaft of the Silver King Coalition Mines Company. The American Flag property is developed by a double compartment, vertical shaft, 1100 ft. weep and fully equipped with first class machinery and equipment of all kinds for mining purposes. The Marsac Company for the present is devoting all mining activities to that portion of the ground below the 1100 ft. level of the American Flag mine; the upper levels of the mine are at present under lease to Douglas C. Despain. A 750-ft. drift extends southwesterly on the 1100-ft. level from the shaft toward the Silver King property, and 300 ft. from the shaft on this level a winze was sunk on the vein to a depth of 200 ft. A drift was extended southwesterly a distance of 650 ft. from the bottom of this winze. At the time the winze was sunk the bottom was at water level. The vein averages from three to four feet wide for a distance of 650 ft. No work was done below this level on account of the water. Since work was abandoned in that portion of the mine the Park City Consolidated Company, which lies to the east has carried on deep development of its property and has drained the American Flag ground down to the 1650 ft. level. The Marsac Company is now equipping the 1100 and 1300 ft. levels with adequate ventilating systems preparatory to sinking the winze, an additional 300 ft. on the ore from which levels will be extended both ways along the vein and the ore will be stoped up to the 1300 ft. level. An average sample of ore taken from the vein on the 1300 ft. level assays as follows: .078 oz. gold, 21.6 oz. silver, 11.5% zinc and 10% lead. It is anticipated that the metallic content of the ore will increase as depth is attained. The company is installing an electric hoist at the top of the 200-ft. winze.

Park Utah Consolidated Mines Company was organized in June, 1925, and incorporated under the laws of the State of Delaware for 2,500,000 shares with a par value of one dollar each. There are and outstanding 2,091,700 shares. The original Park Utah Mining Company was organized in January, 1917, under the laws of Delaware and in 1925 the capitalization was raised to 2,500,000 shares and the name changed to the Park Utah Consolidated Mines Company. The corporation now represents a consolidation of the Park Utah Mining Company, the Park City Mining Company and the Ontario Silver Mining Company. The Park City Mining and Smelting Company was a consolidation in 1922 of the Judge Mining and Smelting Company, the Daly West Mining Company and the West Ontario Mining Company. In 1925 the consolidated company offered the share holders of the Ontario Silver Mining Company to exchange their shares for shares of the consolidated company on the basis of one share of Ontario stock for one and one-third shares of the consolidated stock. Approximately ninety-nine per cent of the Ontario Silver Mining Company stock has been exchanged for stock of the consolidated company, and on July 9th, 1936, a merger was consummated between the two companies which now makes the Ontaria Silver Mining Company the property of the Park Utah Consolidated Mines Company. The Park Utah Consolidated Mines Company owns the controlling interest in the Daly Mining Company and the Weber Coal Company. The mines are located in Summit, Wasatch and Salt Lake Counties in the Uintah, Snake Creek, Blue Ledge and Big Cottonwood Mining Districts, all situated in what is generally known as the Park City Mining District at Park City, Utah. The property consists of approximately five thousand acres of mineral ground extending along what is known as the Ontario-Daly McHenry ore fissure zone for a distance of approximately eight miles. The production from this fissure zone in the past sixty years has come from the eastern four miles of this area, the western section of the property being wholly unexplored. The property is developed by three major transportation and drainage tunnels, the longest of which is 21,000 ft. in length and serves as a drainage tunnel for most of the Park City District. It is also served by four main shafts ranging in depth from 1,300 ft. to 2,100 ft. and 250 miles of underground drifts and tunnels. The ores produced are principally silver, lead, zinc, including substantial values in gold and copper. The metal production from the combined properties under the consolidation to the end of 1939 is approximately as follows:

Silver, 128,482,830 oz.; gold, 237,436 oz.; lead, 790,310,000 lbs.; zinc, 450,500,000 lbs.; copper, 37,040,000 lbs.

The combined properties have paid total dividends in the sum of $38,056,586.70. The mine is completely equipped with a central air compressor plant, machine shops, modern electric hoists, pumping plant, electric haulage, an aerial tramway, bunk houses and a 500-ton wet concentration mill. The company is provided with modern change rooms at the Judge tunnel of the City unit and at Keetley, located at the portal of Ontario drain tunnel No. 2. The company has not operated the concentration mill since the shutdown in the spring in 1932. The crude ore is now shipped to the mill of the smelting company. In the spring of 1932 the management decided to cease production of ore and suspend all operations due to the extremely low metal prices then prevailing. Production was not resumed until November, 1935. Since resumption of work the company has operated on a basis of five days per week, employing approximately 400 men. Dividends amounting to $313,725.15 were paid on December 20, 1937. The metal prices having again reached a low mark in the early months of 1938 all production of ore was suspended and the property closed on May 5th, 1938. The work was resumed on May 16, 1939, and production increased to approximately 7,000 tons per month by the end of the year. A dividend of 10c per share was paid on June 7, 1940.

Silver King Coalition Mines Company, Kearns Bldg., Salt Lake City, Utah. David Keith, Pres.; Thomas F. Kearns, V-Pres.; James Ivers, V-Pres. and Gen'l Mgr.; Mearle G. Heitzman, Mgr. of Operations; S. B. Lamkin, Secy. and Treas. Directors: A. C. Ellis, Jr., J. F. Fitzpatrick, George Jay Gibson, Wm. J. Halloran, Jay T. Harris, Mearle G. Heitzman, James Ivers, Thomas F. Kearns and David Keith.

The property of the Silver King Coalition Mines Company lies in the Uintah Mining District, Summit Co., Utah; the Park City District, in which the property is located having produced over $332,500,000.00 in ore values.

The mineral bearing area of the company's holdings consists of about 4,925 acres of patented ground lying in the heart of this zone and extending along its strike for nearly five miles and has produced over $108,200,000.00 in lead, silver, gold, zinc and copper; of this amount $29,300,000.00 has been paid in dividends. The company is capitalized for 1,250,000 shares, 1,220,467 of which are outstanding; par value $5 each; there are over 2700 stockholders and the stock is about 55% Utah owned. Stock is listed on New York and Salt Lake Stock Exchanges. There are about 285 miles of underground workings.

Equipment: A new Nordberg electric double-reel hoist equipped with oil brakes and clutches, the latest safety devices and driven by a 400-horsepower General Electric motor was installed at the main shaft in 1937. A new Nordberg electric double drum hoist with same type brakes, clutches and safety devices and driven by a 250-h.p. General Electric motor was also installed at the Thaynes Shaft together with steel-reinforced concrete bins, a structural steel and concrete combination hoist-house and a change room. Thaynes Shaft is equipped with 48 cu. ft. skips. Waste disposal at Thaynes Shaft is effected by a 24-in. belt conveyor, 165 ft. long dropping the waste material in the center of Thaynes Canyon.

General Description of Property: The property of the Silver King Coalition Mines Company is situated in the Park City Mining District, Summit Co., Utah, on the eastern slope of the Wasatch Mountains, about 31 miles from Salt Lake City, Utah. It is west central part of township 2 south, range 4 east and in the southeastern part of township 2, range 3 east, Salt Lake base and meridian.

As is suggested by the present name, Silver King Coalition Mines Company property, its original area has been greatly increased by consolidation and purchase of adjoining companies and groups of claims. These companies and groups of claims are as follows: Silver King Mining Company, Union Mining Company, Park City Mining Company, Fairview Mining Company, Alliance Mining Company, Woodside Mining Company, Massachusetts Mining Company, Jupiter Mining Company, Kearns Keith Mining Company, Crescent Mining Company, Apex Mining Company, Boxx Mining Company, St. Louis-Magnolia Mining Company, Baltimore Mining Company, Pinyon Mining Company, Odin Mining Company, Belmont Mining Company, Uintah-Treasurer Hill Mining Company, Conklin Mining Company, Park City Mining and Smelting Company, Cumberland Mining Company, Silver Star Mining and Milling Company, Silver King Consolidated Mining Company, Three Kings Consolidated Mining Company and the following groups of claims: Hughes Bogan Group, Northland Group, Mayflower Group, Shadow Lake Group, Kentucky Group, Ferry Group, Thomas Kearns Group, Henry Newell Group, The Addenda Group, Pioneer Group, Northern Light Group, Jorgensen Group and Mt. Masonic Group.

This property, which had its beginning with a small area of about 25 acres in Woodside Gulch, now consists of 526 claims covering a total area of 4,234 acres. The company owns in addition, 691 acres in ranches and tailing ponds. The property is laid out on the ground strike of the sedimentary formation and covers a roughly blocked out rectangle 19,000 ft. long and 10,000 ft. wide.

History of Workings: The Silver King Coalition property had its beginnings with a lease on the Mayflower workings in Woodside Gulch operated by Messrs. Kearns, Keith and others, the showing leading to a purchase of the Silver King Nos. 1, 2 and 3 and 4 claims 24.4 acres in area. At the time this property was taken over the Silver King shaft had been sunk to the 730-ft. level as one hoisting compartment and a manway. The 700-ft. level was extended and cut the ore. The shaft was enlarged in 1893 for a second hoisting compartment and in 1898 was sunk to the 1,300-ft. level and is now the main shaft of the Silver King Coalition property with main haulageways at the 500- and 1,300-ft. levels.

Since the original Silver King Company was formed in 1892, it has made rapid growth through acquirement by consolidation or purchase of smaller properties and groups of claims. In this way the company has come into ownership of the Alliance and Silver King Consolidated drain tunnels. The Alliance Tunnel acquired in 1899, which has its portal at the mouth of Walker and Webster Gulch, connects with the Silver King shaft 500 ft. below the surface. At the time of purchase this tunnel was 7,500 ft. in length and was subsequently extended to unwater an unexplored country under Crescent Hill. At a point 9,600 ft. from the portal and 1,400 ft. beneath the surface a 3-compartment shaft was sunk 800 ft. to the 1,300-ft. level. This shaft was sunk for the purpose of developing ore bodies in the Park City formation along the Crescent Fissure which is known as the Silver Hill section. There are workings on the 600, 700, 800, 900, 1,100 and 1,300-ft. levels. Ore is handled through the 500 level and the Silver King shaft to surface.

The Silver King Consolidated Tunnel, whose portal is in the foothills just east of the mouth of Thaynes Canyon, is connected with the 1,300-ft. levels of the Silver Kin, Silver Hill and Thaynes Shafts. It is also connected with a vertical interior shaft known as the West End, which is sunk in a crosscut 10,570 ft. from the portal. This shaft is 7,000 ft. directly west of the Silver King shaft, and besides being connected with the 1,300 Silver King level, has workings on the 1,500, 1,600, 1,700, 1,800 and 1,900-ft. levels. Other shallow vertical shafts have been sunk from the 1,300-ft. Silver King level for the purpose of extraction of ore where this system would be more economical than the driving of long crosscuts. All ore from these auxiliary shafts, including the west end, is handled through the 1,300 main haulageway and the Silver King shaft to surface.

Geological description of country: This property lies on the west limb of the Park City anticline, the formation being seduments, varying in age from Carboniferous to Triassic, cut and locally metamorphosed by stocks and dikes of diorite and diorite porphyry. The sedimentaries consist of limestones, quartzites and shales, which have been grouped by J. M. Boutwell in his report on the "Geology and Ore Deposits of the Park City District" for the U. S. Geological survey as follows:

Formation	Thickness
Nugget Sandstone	Incomplete
Ankareh Shales	1,150 ft.
Thaynes Formation	1,290 ft.
Woodside Shales	700 ft.
Park City Formation	*650 ft.
Weber Quartzite	1,700 ft.

* Average in Silver King Coalition ground.

Of the above, the two upper formations have been unproductive, the Park City and Thaynes horizons producing most of the ore.

After the intrusion, depositions of metallic sulphides occurred followed by fracturing in a northeast-southwest direction and renewed deposition of sulphides in this fissuring. Faulting in a northwest-southeast direction caused some displacement and also gave surface waters access to the primary ore bodies in the upper levels causing oxidation.

The ore bodies follow the northeast-southwest fissures making both bedded and fissure deposits. The bedded deposits replace soluble members in the limestone, the most productive of which occurs in the Park City formation about 100 ft. above the Weber quartzite. Another very productive horizon occurs on the contact between the Park City formation and the Weber quartzite. The fissures cross and dip of the beds at a slight angle causing the replacement deposits to pitch slightly to the southwest. The outline of the replacements is irregular, making lobes and branches which sometimes cross from one fissure to another without a visible lead. As a whole, however, the replacements continue along the fissure systems with nearly regular area of cross section becoming thinner as it widens or higher as it narrows.

The lode or fissure deposits often occur in the Weber quartzite under the replacements in the limestones and appear to be the channels through which the mineralizing solutions circulated and formed the replacement deposits above. Only about 5% of the total Silver King output comes from fissure deposits, the remaining 95% coming from beddings. The bedded deposits, especially, have proved very persistent, extending for more than 10,000 ft. along their strike with no indications of a decrease either in metal content or dimensions.

The ores now being mined are nearly all sulphides carrying lead, zinc, silver, gold and copper. The minerals are commonly galena, pyrite, sphalerite and tetrahedrite and gangue minerals of country rock, quartz, chert, calcite, dolomite, fluorite and rhodochrosite.

Ore Bodies: Records of tonnage and content of ore bodies have been kept since 1907 and the history of the property has shown a remarkable uniformity of section and content. The fissure systems considered are eleven in number, and estimates of tonnages have been made based on cross-sectional area and length of ore body.

Developed ore is estimated for the distance actually blocked out. Probable ore is that which is partially developed and geological conditions are such that, together with the characteristics of ore bodies in the property this ore can be predicted with nearly actual certainty. Possible ore is that which may be developed along certain fissure zones where general geological conditions are favorable but proving of the area has not progressed far enough to place it in the probable class.

Tonnage per running foot along the fissure systems have either been calculated from measured sections or the actual productions taken and reduced to a running foot basis.

The cubical content per ton has been determined by research done in connection with litigation in the area of this property, based on the metal content and by actual specific gravity tests made. Practice has shown that the running foot method of estimating tonnage gives the most consistent results and has been in use since 1907. The tonnages are shown elsewhere in this application under the title, "Tonnages of Fissure Systems."

Development: Development in the Silver King Coalition property was begun with the Silver King shaft acquired by purchase in 1892, when it had been sunk to a depth of 730 ft. This shaft is still in use as the main shaft of the property. Since purchase of the Silver King claims, development has been pushed vigorously and adjoining properties have been acquired, the workings of these latter being connected and made a part of the extensive workings of the Silver King Coalition property, until at present the main openings consist of three vertical surface shafts (one inactive and now used for ventilation only), six vertical auxiliary and underground shafts and two drain tunnels. Of the two drain tunnels, the Alliance connects with the main Silver King shaft at the 500-ft. level, and the other, the Silver King Consolidated Tunnel connects with the same shaft on the 1,300-ft. level.

The extensive area covered by the ore bodies of this property, their flat dip and their depth from the surface, render either long cross-cuts from the present main shafts or auxiliary shafts sunk from the surface, impractical on account of development costs, capital investment and transportation problems involved. In order to reduce necessary development or "dead work" on ore bodies to a minimum in this property, it has been necessary to sink shallow vertical shafts from the two main haulage levels. These shafts have been placed where levels could reach the different fissure systems to best advantage. Besides the vertical shafts at times ore shoots are followed down the dip by means of winzes and the ore hauled out in cars or skips. This method of development gives an opportunity of determining the trend and extent of ore shoots below main levels and assists in holding dead work to a minimum by having an exact objective for which to drive on the lower levels.

The property is served by three surface shafts, the Silver King Consolidated 1,800 ft. deep (now inactive and used for ventilation only). The Silver King Coalition shaft, 1,300 ft. deep is still the main outlet and through which all ore is hoisted to the surface. The new Thaynes shaft connects with the Silver King Consolidated tunnel and the 900-ft. level. There are six vertical underground shafts; the A. K. and Silver Hill, sunk from the 500 or Alliance Tunnel level; the West End from the Silver King Consolidated tunnel; the Central and the B. L. from the 1,300-ft. level and the 5,141 from the 1,550-ft. level.

The A. K. shaft is 2 compartment, 500 ft. deep and was acquired by purchase with the Alliance Tunnel in 1899. The shaft is reached through a crosscut driven 1,300 ft. northwest from a point 3,600 ft. in from the Alliance Tunnel portal. Development in the vicinity of this shaft was dormant from prior to 1899 until 1929, when work was resumed and the A. K. fissure system discovered with one of the richest ore bodies in the history of the property.

Sinking of the Silver Hill shaft was begun in 1912 on the Alliance Tunnel or 500-ft. level at a point 9,600 ft. from the portal and 1,400 ft. beneath the surface. Sinking of this shaft was continued to a depth of 800 ft. or to the 1,300-ft. level where it is connected with the Silver King Consolidated drain tunnel. Besides the 1,300 there are workings on the 600, 700, 800, 900 and 1,100 levels. Ore is handled through the 500 or Alliance tunnel and the Silver King shaft to surface. The shaft is three compartment, two for hoisting and a manway.

The West End shaft is at the end of a crosscut 600 ft. long, which leaves the east side of the Silver King Consolidated Drain Tunnel at a point 10,570 ft. from the portal. The collar of this shaft is 1,650 ft. vertically beneath the surface and 50 ft. above the Silver King 1,300-ft. level with which it is connected, ore being transferred through this level to the Silver King shaft. Besides the connection with the 1,300 level there are workings on the 1,500, 1,600, 1,700, 1,800 and 1,900 levels. This shaft is three compartment, two for hoisting and one compartment for ladderway, watercolumn and compressed air lines.

Two vertical shafts have been sunk from the 1,300 level, the Central 150 ft. deep and the B. L. 250 ft. deep. The 5,141 shaft 250 ft. deep was sunk from the 1,550 level. These shafts have been sunk to get the ore to the 1,300 or main haulage level with a minimum amount of tramming and to facilitate ore extraction and economic operation of the levels reached.

During the low prices of metals, several large ore bodies have been developed, production being restricted in order that the resources of the property might be conserved for a period of better prices.

Development, consisting of drifting, raising and sinking, for the ten year period 1924 to 1933 inclusive, totals 252,659 ft. or 47.9 miles, an average of 25,266 ft. or 4.79 miles per year. The total length of all underground workings is now more than 285 miles.

Ore extracted for the same ten year period totals 1,367,858 tons or an average of 136,759 tons per year.

Equipment: The property is equipped for a production of 800 tons per day, and as has been stated, is served by two drain tunnels, three shafts (one inactive) and six vertical underground shafts. The Silver King surface shaft is equipped with a Nordberg electric, two-reel hoist with flat ropes and two deck cages operated in balance. The Silver Hill underground shaft has a 400 h.p. Wellman, Seaver, Morgan electric hoist with three ton skips operated in balance. This hoist is set in a station excavated in the solid rock with dimensions 110 by 35 ft., having concrete walls from 2 to 5 ft. thick, reinforced with steel rails and beams. The roof is elliptical and raises from 12½ ft. in the back to 50 ft. over the headframe. The west end shaft is served with a 125 h.p. double drum hoist operating 2½ ton skips. The hoist is set in a station 113 ft. long which is sprayed with cement to prevent slacking of the limestone. The other shafts are equipped with hoists and stations adequate for the service required.

Originally the Silver King property was served by two steam driven air compressors. These were replaced by electrically operated machines. These motor driven compressors have been lately supplemented by a central compressor plant near the portal of the Silver King Consolidated Tunnel of 3,500 cu. ft. per minute displacement, which discharges into a pipeline 11¾ in. in diameter later being divided into 2 lines of 8 5/8 in. diameter each, smaller lines being continued in the stopes and working faces. The property now has a total compressor capacity of 9,365 cu. ft. displacement of which 4,659 cu. ft. is in operation and 4,706 cu. ft. is in reserve.

All of the working levels are provided with electric haulage track, gauge 18 in. with 30 lb. rails and average grade of one-half of one percent. Two sizes of electric locomotives are in use, depending upon the needs of the particular locality. The larger size has a draw bar pull of 2,600 lb. and the smaller 1,200 lb. The average train is about 35 cars carrying a combined load of ore varying from thirty to forty tons. The property is provided with a steel and concrete mill of 800 tons capacity equipped with the latest and most efficient machinery and with a sampling mill by which an accurate sample of all material shipped to the smelter is obtained. Change rooms and heating plants are provided at all mine exists. The shaft house, machine shops, change houses and many other buildings are of fire-proof steel and concrete construction.

The property is equipped with carpenter shops, blacksmith shops and machine shops where cars, cages and other equipment are made and which provide adequate facilities for all necessary emergency repairs. A Leschen Aerial Tramway delivers ores and concentrates from mill to railroad; hauling mine supplies on return trips, a distance of 1½ miles. The lower terminal is equipped with concentrate storage bins of 700 tons capacity.

A careful estimate shows the replacement cost of equipment and buildings in use and necessary for the operation of the property is approximately $2,650,000.

The cost of development, shafts, tunnels, levels, drifts and raises to develop present ore reserves and for economic extraction of present ore bodies is estimated to be $4,000,000; this includes main haulageways and main shaft as well as workings in the vicinity of the ore bodies, the total length of which measures nearly 50 miles, not including underground shafts. The combined replacement cost of building and equipment with necessary development would, therefore, be more than $6,650,000.

A new three compartment vertical shaft near the head of Thaynes Canyon was completed during 1939; total depth 1,752 ft. This development will permit the exploitation of an extensive area of undeveloped mineralized territory, improve ventilation and reduce costs.

Birthday Consolidated Gold Mines, Inc., c/o Charles S. Woodward, Pres., Beneficial Life Bldg., Salt Lake City, Utah.
Property: 5 patented claims at Gold Hill, Tooele Co., Utah.

Boston Sunshine Mining Company of the Dern Investment Company.
Located at Sunshine in the Camp Floyd Mining District about 4½ miles south of Mercur, by road. This property consisting of five patented claims was first operated in 1895 and production up to 1910 amounted to the sum of $221,000. From 1910 until 1938 this mine was worked at different times by leasers with very little production. In 1939 a group of six men headed by Mr. Al. Wondershek and Mr. Robert Jones of Mercur, Utah, secured a five year lease on this property. Since these operations started about 1,000 ft. of drifting and stoping have been done as well as opening up the old incline shaft for a distance of about 700 ft. Production for 1939 amounted to 7,000 tons of gold ore all of which was milled in Mercur by Snyder Mines, Inc.

The mine is equipped as follows: One 50 h.p. gasoline hoist, one 320 cu. ft. compressor, headframe, ore bin, skip, mine cars and other necessary mine tools.

Bullion Coalition Mines Company, (Utah), c/o Combined Metal Reduction Co., Stockton, Utah.
Honerine Mine at Bauer, Tooele Co., Utah, was sold to Combined Metals Reduction Company.

Cliff Lease, 1108 Newhouse Bldg., Salt Lake City, Utah.
On April 20, 1940, it was reported that high grade silver, lead ore carrying small values in gold were opened in a drift on the 650 ft. level of the Ophir Queen Mining Company property by Cliff Lease. The Ophir Queen holdings are in the Dry Canyon section of the Ophir District, Tooele Co., Utah.

Combined Metals Reduction Company—Bauer Plant. Stockton, Utah. F. W. Rockwell, Pres. and Dir.; Genc McCallum, V.-Pres.-Secy. and Dir. and Berthol Guy Sweet, Treas.

The Honerine Mine at Bauer was acquired by purchase from the Bullion Coalition Mines Company; mine workings are entered through the Honerine Drain Tunnel which also serves as the main haulageway. The Bluestone and West Calumet Mines are connected with the Honerine Tunnel and operated under lease by the Combined Metals Reduction Company. The tunnel enters the property for a distance of 2.5 miles, at which point it attains a vertical depth of 1,200 ft. from the surface.

Principal production consists of silver-lead and silver-lead-zinc sulphide ores, now produced from stopes below the tunnel level. Water pumped from these workings flows through the drain tunnel to the surface, where it is stored for use in the mill and steam plant. Present workings are reached by means of underground shafts of from 400 to 600 ft. in depth.

Ore is hoisted from the stope levels to the tunnel level, transferred to ore trains and hauled to the surface by electric storage battery locomotives. It is classified in the surface bins and loaded into railroad cars by means of a conveyor belt. Complex lead zinc ores are treated in the Bauer mill and smelting ore is shipped directly to the International Smelter at International, Utah.

All underground equipment, with the exception of drills and tugger-hoists, is electrically operated. Compressed air for all properties under operation is supplied by steam driven compressors located in the steam plant.

The Bauer mill has a capacity of 600 tons per day and treats ores from Butterfield Canyon, Utah; Hailey, Idaho and Pioche, Nevada, in addition those produced by the Honerine Mine, lead, zinc and iron concentrates are recovered by selective flotation; lead and iron concentrates are shipped to International, Utah, and zinc concentrates are shipped to Great Falls, Mont.

Other properties of the Combined Metals Reduction Company are situated in Butterfield

Canyon, Utah, and Pioche, Nev.

Depression No. 1 and Depression No. 2 Mining Claims.

Located in Goshoute Canyon about seven miles west of Callao, Utah. Mr. Mark Lyman and Mr. Max C. Smith of Callao, Utah, are buying these claims under a bond and lease. This property is equipped with an air compressor, machine drills and other tools and a cabin. Workings consists of a tunnel in about 50 ft.

Geyser Marion Gold Mining Company.

The Geyser Marion Gold Mining Company was incorporated in 1932. The authorized capital of the Company consists of 1,000,000 shares having a par value of 1 cent. The present officers and directors are: Ben F. Redman, Pres. and Dir.; E. S. Sheets, V.-Pres. and Dir.; F. B. Bothwell, Secy.-Treas.-Dir. and Gen. Mgr.; A. L. Hoppaugh, Dir.; and Roy C. Bothwell, Dir. The property owned by the Company consists of approximately 600 acres of patented lode mining claims in Camp Floyd Mining District in Tooele Co., Utah. These claims embrace most of the property owned by the old Geyser Marion Gold Mining Company, which operated the properties until about 1906, as well as substantial additional areas. There is no connection between the old company and the present company other than that the present company owns certain of the properties once owned by the old company. This property is being worked by leasers who are mining approximately 50 tons of ore per day.

The Company also has a lease on the property of the Sacramento Gold Mining Company insofar as open pit mining is concerned. This property is producing approximately 700 tons of ore per day and is being mined by three Diesel powered shovels, the ore being transported by motor trucks from the open pit to the company's milling plant.

The company owns and operates a cyanide mill having a capacity of about 800 tons a day and in addition to the ores mentioned above, is purchasing ore from independent shippers, including the Utah Mercur Gold Mining Company, which has a lease on the underground ore of the Sacramento Gold Mining Company and also on the property of the Herschel Gold Mining Company.

1939 production consisted of approximately 150,000 tons having a gross value of approximately $500,000. Tailings losses amounted to $141,000 leaving a net recovery of $359,000. No shipments were made to smelters inasmuch as all of the ore was oxidized and susceptible to cyanidation.

The geological character of the ores is similar to that prevailing in general in the Mercur District. The ore is inherently soft and easily mined and crushed which is largely responsible for the very low operating costs, permitting ore of the grade indicated to be profitably handled.

Herschel Mine.

Located near Mercur, Utah. U. U. Hiskey and A. C. Ellis, Trustees, Kearns Bldg., Salt Lake City, Utah. Mine is under lease to Mr. Charles Mercer of Mercur, Utah. A good tonnage of gold ore has been produced from this mine. This property is operated through the Sacramento Tunnel of the Geyser Marion Gold Mining Company and the ore is also milled by this company.

International Smelting Company, Kearns Bldg., Salt Lake City, Utah.

Smelter at International, Tooele Co., Utah.

Kearsarge Mining Company, Salt Lake City, Utah.

Property: Dry Canyon, Tooele Co., Utah.

Product mined: Silver, lead, gold.

Lakeside Monarch Mining Company.

Lakeside Monarch Mining Company is a Utah corporation. Mining property consists of 24 mining claims, situated in the Lakeside Mining District, Tooele Co. Mine located 27 miles north of Delle, Utah. Mine developed by tunnel 1800 ft. long, four raises from tunnel level up various heights, but two reach the surface having a height of 330 ft. each. One winze 200 ft. in depth below tunnel level. The above with other works, drifts, crosscuts, etc., equal 7,000 ft. of mine openings. Ore body makes along large fault fissure and as a partial replacement of the limestone underneath fault fissure. Ore replaces limestone to a width of 15 to 30 ft. from fissure. Officers of the company are: Geo. H. Short, Pres.; J. D. Shilling, V.-Pres.; Lawrence Fox, Secy.-Treas., with L. S. Brackon, A. W. Watson and L. H. Kimball as the Board of Directors. Offices are at 1112 Continental Bank Bldg., Salt Lake City, Utah.

Mine is equipped with 100 h.p. semi-Diesel engine, 600 cu. ft. compressor, drill sharpener and all other necessary equipment to operate at 100 tons per day capacity, also, water supply, living accommodations for 25 men.

Lion Hill Mines, 1001 Walker Bank Bldg., Salt Lake City, Utah.

Property: Lion Hill, Ophir, Tooele Co., Utah.

Product mined: Silver.

Mercur Dome Gold Mining Company.

Mine located in Mercur Canyon, about one mile west of Mercur, in the Camp Floyd Mining District. The capital stock of this company consists of 2,000,000 shares of stock having a par value of one cent per share. Office of the company is located at No. 10 Roundy Bldg., Provo, Utah. Company officers: S. H. Buckley, Pres.; C. N. Sweet, V.-Pres. and Gen. Mgr., and Mr. Zenos Porter, Secy.-Treas.

Property is equipped as follows: Engine house, headframe, 40 h.p. gasoline hoist, skip, 320 cu. ft. compressor portable type, one 12 inch blower and vent, tubing machine drills, steel and other tools, blacksmith shop and four cabins.

This property is in the development stage, consisting of an incline shaft about 560 ft. deep and some diamond drilling. It was reported that the company intends to continue sinking operations until the Madison lime beds are reached. This company began operations in July, 1937. The company owns 400 acres of ground, 100 acres being patented.

Monarch Mine, 315 Dooly Bldg., Salt Lake City, Utah.

Property: Lakeside Mining District, Tooele Co., Utah.

Product mined: Lead.

National Lead Company, 111 Broadway, New York City.

Property: Tooele Co., Utah.

New York Bonanza Mining Company.

The Naildriver Mining Co., 1003 Continental Bank Bldg., Salt Lake City, Utah, informed us on May 8, 1941, that they purchased seven claims from the New York Bonanza Mining Company in 1919. The bondholders of the New York Bonanza Mining Company foreclosed on their property and later sold a certain interest to the Naildriver Mining Co. The shares of the New York Bonanza Mining Co. are therefore worthless.

O. K. Central Mining Company, Kearns Bldg., Salt Lake City, Utah. Thomas Kearns, Pres.; J. F. Fitzpatrick, Secy.

Capital: $100,000.00; par value 10c; 988,373 shares issued.

Equipment: 25-h.p. gasoline engine, Sullivan air compressor, engine house, compressor room.

Development: Approximate amount of underground workings, 4,000 ft.

Ophir Development Company, Ophir, Utah. D. C. Gilbert, Pres. & Dir.; S. D. Cook, V-Pres. & Secy.-Treas.

Capital stock: 100,000 shares at 10c per share; 20,000 unissued, 80,000 issued. Property fully equipped with compressor plant, machine shops, office and other buildings, all of which are fully paid for. No accounts payable. This company operates the following properties: Ophir Mining District, Tooele Co., Utah. Ophir Hill Consolidated Mining Company Mine, purchased by International Smelting & Refining Company and now under a 40-year lease to the Ophir Development Company. This mine is worked through a tunnel and incline shaft and there are approximately 12 miles of underground workings.

Product mined: Silver, lead, copper, zinc.

The Ophir Coalition Mines Company is contiguous to the Ophir Hill property and is under lease and bond to the Ophir Development Company.

This mine is worked through the Ophir Hill Drain Tunnel and has about 4 miles more or less of underground workings.

Product mined: Silver, lead, copper, zinc.

The above mines are worked under the leasing system.

Camp Floyd Mining District.

West Dip Mine (Lewisohn Estate Property) under bond and lease with the Daisy Group being under sub-lease to the Snyder Mines, Inc. Property is operated through an incline shaft to the 700-ft. level and at the present time gold ore is being produced on this level.

The Omaha group is being worked by the Ophir Development Company through the Lark Incline. Ore is being produced on the 150-ft. level. This claim is worked under the leasing system and the principal ore is gold.

The Lacigale group consisting of 311 acres is under sub-lease to the Snyder Mines, Inc. The Ophir Development Company owns an undivided one-half interest in this group. Mrs. Luigia Cuatto owning the other one-half interest. The Snyder Mines, Inc. are treating tailings from this group of claims.

Ophir Hill Consolidated Mines Company, Ophir, Utah.

Property: Tooele Co., Utah.

Product mined: Silver, lead, copper, zinc.

Ore Del Rey Mine.

Owned by Alma Tripp and C. J. Tripp of Callao, Utah. Mine located about seven miles west of Callao, Utah.

Property: Consists of 23 unpatented mining claims. A number of shipments of gold, silver, and lead ore have been mined in the past two years.

Equipment: Gas hoist, compressor, rock drills and two aerial tramways.

Rube Mine, Gold Hill, Utah. Leffler Palmer, Mgr. and owner.

Property: Well equipped with all necessary machinery.

Development: Consists of two shallow shafts and several hundred feet of drifts and stopes. Property located one and one-half miles north of Gold Hill, Utah.

Product mined: Gold.

Silver Shield Mining & Milling Co., 23 East First South St., Salt Lake City, Utah.

Property: 3 patented claims in the Gold Hill district, Tooele Co., Utah.

The Snyder Mines, Incorporated, Felt Bldg., Salt Lake City, Utah. E. H. Snyder, Pres.; George W. Snyder, V-Pres.; Guy Snyder, Secy.-Treas; Neal Snyder, Gen'l. Mgr.

Capital authorized: 500,000 shares Class "A" or preferred stock; par value $1, and 1,000 shares Class "B" or common stock, without nominal par value. The company operates the Triumph Mine Unit at Hailey, Idaho, producing gold, silver, lead and zinc, and the Mercur Unit at Mercur, Utah, producing gold.

Mercur Unit: The mining operation formerly known as the Lewiston Peak Mines, consisting of 72 patented claims containing approximately 740 acres of mineral ground located in the Camp Floyd Mining District, Tooele Co., Utah.

This property was first worked by three individual companies known as the Brickyard Gold Mining Company, the Golden Gate Mining and Milling Company and the Mercur Gold Mining and Milling Company. Later the three were consolidated into the Consolidated Mercur Gold Mines Company and worked as such from 1902 until 1913. The Snyder interests obtained control in 1934 and have operated it since that time as their Lewiston Peak Mine, which was later absorbed as the Mercur Unit.

The ore deposits of Mercur consist of replacements in shale, sandstone and silicified limestone on the east limb of a northwest-southeast anticlinal fold that extends from the northwest Ophir to several miles southeast of Mercur. The occurrence is confined to various beds in a section about 300 ft. thick and lying about 500 ft. above the base of the Great Blue formation and some 3,500 ft. above the Ophir shale. The principal ore zones or beds are known as the Upper Mercur, Apex, and Magazine from top to bottom. They vary from five to twenty ft. thick in the beds although in places mineralization has been so intense as to result in stopes up to 80 ft. thick. The Mercur bed has been most productive with the Upper, Magazine and Apex following in that order.

The beds have a general strike of north-south to N. 30 W. and dip about 25 degrees to the east. All of the ore beds outcrop at many places on the property, a condition which makes for economic development and mining operations.

During the past three years, the Snyder operation has consisted in opening thousands of feet of working, including the Electric, Resolute, and Silver Tunnels, sinking the Hayes, Ingersoll, Apex shafts; reopening the Wall shaft in the Brickyard and sinking the Hullinger shaft in the Lulu area. Hundreds of feet of new levels from the 100 down to the 1,100 levels have been driven in the Golden Gate area. Many old stoped areas have been reopened for the recovery of valuable gob and pillars.

Modern hoisting and mining equipment has been installed at the various openings, and a flourishing camp has been developed. An efficient pumping plant forces water from the mouth of Ophir Canyon seven miles to the mills and camp.

During 1937, the Snyders built a 500-ton mill for the treatment of the gold ores in the area. Combinations of fine grinding, flotation and cyanidation are used in treating the various oxidized and base ores and the dumps. Mining low grade ores by open pit methods has been carried on during the past year at three places on the property. Other areas are still to be investigated. The dumps of the old mill are estimated to contain over 3,000,000 tons of tailings, a large part of which it is planned to treat in the mill when suitable additions have been made.

At the present the development of the property and the mining of the ore are being carried on under a leasing system. This has been found particularly suited to the local economic conditions and to the occurrences of the ores.

The mill is operating at its approximate capacity of five hundred tons per day. Recent tests have shown considerable improvement in metallurgy of the Mercur dumps. Further expansion of this operation may be looked for in the future.

Star Dust Mines, Inc.

Mine and mill located at Gold Hill, Utah. Company incorporated in 1937 for 100,000 shares of stock. This company owns 13 mining claims in the Clifton Mining District about 2.5 miles northwest of Gold Hill. Officers: Mr. Fred Cook, Pres., Gold Hill, Utah; Mr. E. H. Burdick, Secy.-Treas., 625 Judge Bldg., Salt Lake City, Utah.

Equipment: Mine equipped with air compressor, drills and other tools, two buildings, mill, small concentration type. Production, 1938—18 tons containing 25% W03. 1939, two tons of high grade tungsten ore containing better than 60% W03.

Tintic Ophir Mines Company.

Located on Lion Hill at Ophir, Utah. Company officers: J. R. Walker, Pres.; Dean F. Brayton, Secy.-Treas. Office: 706 Newhouse Bldg., Salt Lake City, Utah. This property is equipped with an electric compressor (2 drill), blacksmith shop, drill sharpener and tools, machine drills, mine cars and other equipment. Snow sheds and two houses are also provided. During the past two years, leasers have shipped some silver, gold, lead ore from the older workings of this company. A development campaign was conducted by the company in the Buffalo Tunnel. 2,000 ft. of work was done, mostly drifting two raises and a winze was also run. The company is incorporated for 2,500,000 shares of stock.

Utah Bunker Hill Mining Company, 352 Almond St., Salt Lake City, Utah. John V. Long, V.-Pres. and Mgr., and Hoyt F. Madison, Secy.

Property: Mine located in the Free Coinage Mining District of Tooele Co., about 8 miles east of Grantsville. Workings consist of a tunnel about 500 ft. long, three short crosscuts and some stoping above the tunnel also an incline winze about 140 ft.

Equipment: Small air compressor, machine drills, mine car, track, blacksmith shop and some other tools.

Product mined: Lead, silver. Production 1939, about 30 tons.

Utah-Indiana Mining and Milling Company, 1919 5th East, Salt Lake City, Utah.

Property: Mine located in Erickson Mining District, about 8 miles south of the Simpson Springs, C. C. C. Camp.

Equipment: Gasoline compressor, machine drills, mine car and other tools, compressor house and cabin.

Eureka Lilly Consolidated Mining Company.

This company is a consolidation, effective January 1, 1938, of the former Eureka Lilly, East Tintic Consolidated, Provo and Iron King Consolidated Mining Companies, 1111 Walker Bank Bldg., Salt Lake City, Utah. James W. Wade, Pres.-Gen. Mgr.; Harriett D. Travis, V.-Pres.

Capital: 3,500,000 shares; par 10c; 3,259,003 shares authorized for allocation to the outstanding shares of the component companies of which 3,164,326 shares are outstanding.

Property: 850 acres of patented land adjoining the Tintic Standard and Eureka Standard Consolidated Mining properties on the west.

Development: There are three shafts on the property besides the old Provo shaft. From the Eureka Lilly shaft, 1,550 ft. deep, there are development drifts on the 1,000, 1,300, 1,400 and 1,550 ft. levels in addition to the old workings on the upper levels. The 1,550 ft. level is at the same elevation and connects with the 1,450 ft. level from the Tintic Standard No. 2 shaft. The Iron King No. 1 shaft, 1,565 ft. deep, and the Iron King No. 2 shaft, 1,500 ft. deep, together with several thousand feet of workings therefrom, develop the former Iron King Consolidated portion of the property. In addition to the workings from these shafts, the north end of the property has been developed from the Tintic Standard No. 2 shaft on the 700 and 900 ft. levels and from the North Lilly shaft on the 700, 900 and 1,200 ft. levels. Drifts on the 1,000 and 1,300 ft. levels of the Tintic Standard No. 1 shaft extend into the property and the 1,300 ft. level from the Eureka Standard shaft connects with the 1,450 ft. level of the Iron King No. 2 shaft.

Equipment: At the Iron King No. 2 shaft there is a complete surface plant, including blacksmith shop and Ingersoll-Rand compressor and hoist. The Eureka Lilly shaft is equipped with a single drum hoist. The property has full mining equipment.

Production in 1939 was 2,876.111 dry tons which yielded 313.095 oz. of gold, 24,322.84 oz. of silver and 77,433.10 lb. of copper.

Lease operations are being conducted in the northerly portion of the property which connects with the North Lilly shaft. Assessments have been levied for the purpose of reducing the indebtedness and of carrying on a development campaign.

Eureka Mines Company, 608 Dooly Bldg., Salt Lake City, Utah. Cecil Fitch, Pres.-Dir.; Thomas Carmichael, V.-Pres.-Dir.; B. L. Cripps, Secy.-Treas.-Dir.; J. Fred Johnson, Dir.; F. I. Perkins, Dir.

Capital stock authorized: 1,000,000 shares; par 1c.

Capital stock outstanding: 879,891 3/5 shares; par 1c.

The Eureka Mines Company was incorporated in 1916 under the laws of the State of Utah and is a subsidiary of the Chief Consolidated Mining Company which acquired control in 1921 and who has since managed the property. The Eureka Mines Company owns the whole or parts of 9 patented mining claims comprising 47.82 acres, all of which are owned in fee and are situated in the Tintic mining district, Juab and Utah Cos., Utah. The company does not own any equipment, but it operated through shafts belonging to the Chief Consolidated Mining Company. While the company did produce some ore in the past, no record of its production is available and it is still considered to be in the development stage.

Eureka Standard Consolidated Mining Company, 1111 Walker Bank Bldg., Salt Lake City, Utah. James W. Wade, Pres. and Gen. Mgr.; H. E. Raddatz, V.-Pres.

Capital: 1,500,000 shares, par value 10c; 1,499,590 shares outstanding.

During the year 1939 the Eureka Standard Mine produced 13,242.522 dry tons of ore which yielded 2,057.776 oz. of gold, 139,863.09 oz. of silver, 2,311,129.00 pounds of lead, 86,170.34 pounds of copper and 1,747,562.62 pounds of zinc.

The mine is being operated under the lease system with approximately six sets of lessees now operating. Company operations consists chiefly of development work with some production on company account.

Total production to December 31, 1939:

Dry tons	351,847.572	tons
Gold	242,549.767	oz.
Silver	3,388,128.99	oz.
Lead	11,180,447.70	lbs.
Copper	2,576,602.18	lbs.
Zinc	2,961,901.71	lbs.

The property consists of over 350 acres of patented land situated on the east side of the Tintic Mining District, immediately south of the Tintic Standard Mining property. In the past the ore has been mined entirely from fissures in the Tintic quartzite along the Eureka Standard fault, but recently ore has been found in the Ophir limestones on the hanging wall.

The work is carried on through a vertical four compartment shaft, 6x23 ft., 1,427 ft. deep, and a winze which extends from the 1300 ft. level to the 1400 ft. level of the mine. In addition there are over 62,000 ft. of drifts, crosscuts and raises. The shaft is connected with the Tintic Standard No. 2 shaft through a tunnel a mile long on the Eureka Standard 800 ft. level and with the Iron King No. 2 shaft on the Eureka Standard 1300 ft. level. These connections are valuable for ventilation purposes.

The shaft is equipped with an 85 ft. steel headframe and a belt conveyor which transfers the ore from the shaft to the ore bins. Steel buildings house the compressor plant, blacksmith shop, electric repair shop and change house. Living quarters are at Dividend near the Tintic Standard No. 2 shaft.

The property is now controlled by the Tintic Standard Mining Company.

Capital: $1,175,000; par value $1.00 per share; 1,140,090 shares outstanding.

During the year 1939 the Tintic Standard Mining Company produced 86,756.834 dry tons of ore which yielded 10,522,284.53 pounds of lead, 1,832,190.50 ounces of silver, 3,687.156 ounces of gold and 942,106.31 pounds of copper, having a total gross value of $1,983,881.02. Cost of freight and refining $921,222.58; mining, labor and supplies, $728,001.82; Federal, State and County taxes, $93,867.86.

Total production to December 31, 1939, not including the Iron Blossom Mine:

Dry tons	1,965,003.54	tons
Lead	515,481,762.85	lbs.
Copper	15,894,012.34	lbs.
Gold	73,791.37	ozs.
Silver	52,473,162.50	ozs.
Dividends paid during 1939	$370,527.35	
Total dividends paid to end of 1939	$17,952,501.29	

The property consists of about 3,000 acres of patented land on the east side of the Tintic Mining District. The ore beds are replacement deposits in the limestones. These limestones, interbedded with shales, occur in a down faulted block bounded by the Tintic quartzite. The principal ore bodies have been found in the limestone next to the faulted face of the quartzite. Recent work, however, has developed ore beds in fissures in the quartzite.

The work is carried on through one principal shaft, known as the No. 2 shaft, which is 1450 ft. deep with a winze extending from the 1450 ft. level to the 1600 ft. level. No. 1 shaft, 1300 ft. deep, is used as an air outlet and for development work. No. 3 shaft, 600 ft. deep, is used as an air shaft and an emergency outlet. Development and exploration is prosecuted to the extent of about 500 ft. each month with the aid of mechanical mucking machines, there being now approximately 26 miles of underground working in the Tintic Standard Mine.

The ventilating system is far more extensive than in any other metal mine in the state. Four large fans, handling about 100,000 cu. ft. of air per minute, control the primary circuit and supply air to numerous small fans which distribute it to the working places. The Tintic Standard No. 1, No. 2 and No. 3 shafts, the North Lily, Eureka Standard, Iron King No. 2 and Eureka Lilly shafts are all connected in the ventilating system. Automatic doors, electrically operated, prevent re-circulation.

The Tintic Standard No. 2 shaft is electrically equipped with a 375 h.p. Wellman-Seavre-Morgan hoist and Ingersoll-Rand compressors which furnish 4250 cu. ft. of air per minute. At this shaft are located the machine shops and carpenter shops, tool sharpening shops and plant equipment. Haulage is by electric storage battery locomotives and electric safety lamps are used throughout the mine.

The company maintains the town of Dividend which has a department store, amusement hall, baseball park, tennis court, golf links and modern homes for 100 families. In addition the company maintains hotel accommodations for 250 single men. An excellent water system takes care of the mine and town. A large number of the employees live in the adjacent farming towns of Goshen, Santaquin and Payson. At present there are 350 men on the Tintic Standard Mine payroll.

More than 60% of the men employed here have been trained in first-aid work by the U. S. Bureau of Mines. A regular mine rescue team is maintained at the mine; also a first-aid hospital.

Property: Approximately 1,800 acres in the east Park City District, in Summit and Wasatch Cos.
Development: The principal development has been carried on through the Star, Park Galena and Mayflower Tunnels, and at the present time ore is being mined from the Park Galena Fissure through the Mayflower Tunnel. This fissure is entirely within diorite, and the principal values are its gold and silver with some lead and zinc. The ore body has been continuous on the Mayflower Tunnel level for approximately 1,000 ft.

The Company has the Flagstaff and the Gold Queen prospects which are being developed. The company has several large compressors, and the Mayflower Tunnel is equipped with the electric storage battery locomotives. A raise connecting the Mayflower Tunnel with the old Park Galena workings is being driven to provide natural ventilation. New buildings, new change rooms, accommodations for the office employees and superintendent have been constructed, and arrangements are being made for the extension of the Union Pacific Railroad to the Mayflower Tunnel site.

The Park City Utah Mines Company was incorporated the first day of June, 1928, under the laws of the State of Delaware. The corporation was capitalized for 1,500,000 shares of stock of a par value of $1.00 per share. As of December 31, 1939, there were issued and outstanding 1,130,000 shares of stock.

The corporation acquired mining property in the southeast portion of the Park City mining district comprising 299 acres of patented mining claims in the Blue Ledge mining district in Wasatch Co. and 88.5 acres of patented mining claims in the Uintah district in Summit Co. The property was first developed by an extension from the Ontario Drain Tunnel No. 2, which work was begun July, 1929, and discontinued in December, 1931, at a total cost of $109,915.40. In the early spring of 1934 a right of way was obtained from the New Park Mining Company to work through the Star of Utah Tunnel, running in a westerly direction and adjacent to the south boundary line of the Park City Utah Mines Company's property. Working through the Star of Utah Tunnel, exploration and development work was begun in the spring of 1934 and continued until November 1, 1935, when all work on the property was suspended because of litigation. Work was resumed in July, 1938, and has continued since that date. At the end of the year 1939 approximately 100 men were employed.

The property has produced to December 31, 1939, 16,471 tons of ore having a net smelter value of $248,468.19. The yield from the above tonnage is as follows:

Gold	3,312 oz.
Silver	216,562 oz.
Lead	4,089,114 lb.
Zinc	630,927 lb.
Copper	212,132 lb.

American Diatomite Company, Clermont, Fla.
Diatomite deposit at Clermont, Lake Co., Fla. Continued research carried on by the American Diatomite Company of Clermont, Lake Co., has resulted in a solution of certain difficult problems connected with the drying, refining and utilization of the Florida diatomaceous earth. A small plant is now operating satisfactorily and a high grade product is being placed on the market. Furthermore, articles manufactured from diatomaceous earth are also being made, chief among which at present is the Everdry salt shaker manufactured by the Ever-Dry Products Company, Clermont. This is a most satisfactory container for salt since the patented top made from diatomaceous earth prevents or retards the entrance of moisture. This small diatomaceous earth industry is attracting a great deal of attention not only in Florida but in other states and it is predicted that the output of both crude material and manufactured products will grow.

DOLOMITE AND MAGNESITE

FLORIDA

Dixie Lime Products Co., Ocala, Fla.
Company has a dolomite plant at Lebanon, Fla. (Road Metal, Concrete, Lime, Collodial Phosphate). The plants at McAllister and Zuber, Fla., specialize in commercial lime and collodial phosphate.

It has long been a matter of record that Florida had immense deposits of high calcium limestones but only recently has development of deposits of magnesian limestone begun. It was in the latter part of 1934 that the Dixie Lime Products Company of Ocala began operations near Lebanon, Levy Co., of dolomitic limestone. This is the first commercial production of dolomite in Florida and therefore marks the beginning of another industry. Heretofore the demand for dolomite limestone was filled from plants outside of Florida but the establishment of such plants within the State means that such products can now be supplied from native deposits. The following is an analysis of this limestone, analysis by the Thornton Laboratories, Tampa, Fla.:

Moisture	0.30
Calcium carbonate	58.52
Magnesium carbonate	38.40
Iron and Aluminum oxides	1.78
Sand and Insoluble matter	0.54
Sulphates	0.52
Phosphoric acid	0.16

Florida Dolomite Co., Pembroke, Polk Co., Fla.
Agricultural limestone (Plant near Sarasota, Fla.) The commercial production of dolomite began during May, 1936. Quarry is located near Oneco, Manatee Co., Fla. The product is sold under the trade name "Florida Dolomite."

IDAHO

Anaconda Copper Mining Co., Caribou Co., Idaho. Office, Anaconda, Mont. James R. Hobbins, Pres.; James Dickson, Secy., both of 25 Broadway, New York City; E. M. Norris, Local Mgr., Conda, Idaho.
Incorporated: Filed in Idaho, April 10, 1916.
Capital: 12,000,000 shares; par $50; 8,919,086 shares issued.
Property: 23 patented claims, 3403 acres, unorganized district, Conda, and in addition leases 1340 acres phosphate rock bearing land from the estate of Charles J. Kelly, Butte, Mont.
Development: 3 adits, 45 ft. above railroad track level, 9 by 9 ft. inside of timbers: No. 1, 6650 ft. long; No. 2, 2660 ft. long; No. 3, 5987 ft. long. Approximate total development 60,339 ft. The main operating tunnels are equipped with 25-lb. rail, 36-in. gauge track, two 20-ton storage battery locomotives capable of hauling a 100-ton net load at a speed of 4 to 7 miles per hour. 10-ton side dump ore cars, power loading machines operated by compressed air and No. 4 Sirocco fan.
Plant: Mine: 1000 cu. ft. compressor; drill sharpeners; machine, blacksmith and carpenter shops with latest type power-driven equipment; switchboards and motor generator charging set; laboratory; electric substation, sawmill and preservative plant for treating mine timbers, all housed in fireproof gunited and steel buildings; 100 h.p. electrically driven hoist. Mill: Crushing and drying plant. The mill feed and storage bins are connected with the main tunnels by large trestles. The storage bins, with a capacity of over 4000 tons, and houses over them are protected with several inches of gunite. The main storage bin is equipped with an Ottumwa boxcar loader and modern railroad scales. The rock drawn from the mill feed bin, which has a capacity of 450 tons, passes over shaking grizzlies, the oversize going to a 12-in. Traylor gyratory crusher, which reduces it to about 2½ in. The product from the crusher and the undersize is elevated and passed over a Mitchell vibrating screen. The rock passing through this screen goes to the dryer feed bin, and the oversize to 22 by 54-in. Anaconda rolls that reduce it to three-fourths of an inch. The product from the rolls is elevated and again passes over the Mitchell vibrating screen. The crushed rock drawn from the dryer feed bins is conveyed into class A-12 Ruggles-Coles dryers by apron feeders. After leaving the dryer the rock goes over a shaking feeder to a chain bucket elevator. This elevator carries it to the top of the mill where it passes through a Vezin sampler, and it is then conveyed to the storage bins. The present capacity of the mill is 400 tons in 24 hours. This output can be increased to 1000 tons in the same time by adding another dryer.

Railroad: 8-mile branch from Soda Springs to mine, with storage tracks that will accommodate 100 50-ton railroad cars, spurs to mill and coal bins, and Wyes at each end of the yards. The gradient of the storage tracks is such that the cars are operated by gravity to and from the storage bins.

Town: The company has erected a model mine town consisting of modern homes, which are rented to employees at a nominal figure. Company offices, bunk and boarding houses, superintendent's home, recreation hall, and a number of small homes have been erected. A fully equipped store is maintained by the company, a postoffice has been established, and a modern schoolhouse erected, and a school maintained. A complete water system for the town and plant has been installed; the water is piped a distance of 2 miles to a 100,000 gallon storage tank from which it is distributed.

Product mined: Phosphate rock.

Employees: Average, 94.

Remarks: Development work during the year: Raising, 1901 ft.; drifting, 1212.5 ft., and crosscutting 15.5 ft. Additions made: 1 Raymond 8 ft. Whizzer type air separator, 1 concrete lined 400 ton underground ore bin and 230 ft. concrete lined Waste Transfer Compartment added to shaft.

National Lead Co. (National Pigments & Chemical Division), 837 Jackson St., Los Angeles, Cal. Geo. L. Radcliffe, Pres.; R. E. Scott, Secy.-Mgr.; Percy Stamdinger, Supt.
Property: California Talc Bentonite deposit, comprising 14 160-acre placer claims, about 2220 acres in San Bernardino Co., Cal.

The deposit is the largest and purest deposit of bentonite in California and has been a steady producer since 1931. Bedded deposit of bentonite that is covered by flow of basalt and rhyolite. The beds strike northwest and southeast; dips vary from 12 deg. to 20 deg. to SW. The thickness of the bentonite beds vary from 6 ft. to 40 ft. The basalt overlying the bentonite beds is from 12 ft. to 15 ft. thick. The bentonite mined is white to gray in color. It is reported to be equal in quality to Wyoming bentonite. The material is manufactured and

sold under the trade name of "Aquagel," a conditioning compound for oil-well rotary mud; also as an admixture for concrete.

The present development is confined to the Lemon group south of Hector.

Development: The company drilled 11 core-drill holes in this area exposing extensive beds of bentonite. In Sec. 26 and 27, T. 8 N., R. 5 E., they stripped off the basalt to a depth of 20 ft., an area 400 ft. in length by 400 ft. in width. From the floor of this open cut a series of incline shafts have been sunk on inclination of 15 deg. to depths of 200 ft., with drifts connecting the shafts. The bentonite mined is hoisted by two 15 h.p. gas engine hoists to bunkers. From bunkers, it is loaded in trucks and hauled to drying platform at Hector siding. The material is sun dried, then loaded into railroad cars for shipment to the company's grinding plant in Los Angeles. Grinding plant is located on the Santa Fe Railroad tracks at 837 Richmond St. Bentonite from railroad cars goes to Acme jaw crusher, then elevated by bucket elevator to 5-ft. by 16-ft. trommel, oversize to Symons disc crusher, then product from crusher elevated to ore bin. From bin, the material is delivered by reciprocating feeder to 2 Bethlehem pulverizers; then by air separator to cyclone dust-collector, to bag house and finished-product bins; from finished-product bins to Howe packer machines. The grinding plant has a capacity of 75 tons per day. The product produced is 75 per cent through 200-mesh screen.

ONTARIO

Algoma Ore Properties, Ltd.

Algoma Ore Properties, Limited, was incorporated in Feb. 1936, with an authorized capitalization of 50,000 shares of no par value, all of which have been issued. The officers and directors are: Sir James Dunn, Pres.; T. F. Rahilly and E. Ward Wright, V.-Pres.; William Jeffrey, Secy.; E. W. Shell, Treas.; W. C. Franz, J. A. McPhail, E. G. McMillan, and H. E. Langford, directors. The head office is at Sault Ste. Marie, Ont. The mine address is Helen Mine.

This company is a wholly owned subsidiary of the Algoma Steel Corporation, Limited, from which various iron properties in Algoma district were acquired, including the Helen Mine in township 29, range 24. This property consists of 42 claims, containing approximately 1,376 acres.

Operations in 1938 were carried on from January 1 to May 31, and from December 5 to the end of the year. The siderite deposit outcropping is at the top of the tallest hill in the vicinity, having a peak elevation of 1,720 ft. above sea level. A tunnel 977 ft. long was driven into it at an elevation of 1,450 ft. At the inside end of the tunnel a raise to the surface of the deposit was begun. About 200 ft. of this raise was completed during 1938. Some 1,200 ft. of box-holes were cut. A total of 7,920 ft. of surface-trenching, 3 ft. deep, was accomplished.

A. A. Richardson was supt., employing an average of 36 men.

Brooke, E. & G., Iron Co., Birdsboro, Pa.
Press report, June 17, 1941:
Wharton, N. J., June 16—Announcement was made today of the sale, effective on July 1, of the Richards Mine, one of Northern New Jersey's oldest iron workings, and near this community, to the E. & G. Brooke Iron Company of Birdsboro, Pa.
Operations at the Richards Mine date back to 1800, and it has been producing iron ore at full capacity since the beginning of the present war, with approximately 200 men employed on three eight-hour shifts. The workings produce high-grade concentrates for blast furnaces and lump ore for open-hearth furnaces, and their current output is 10,000 tons a month.
The Thomas Iron Company, a subsidiary of the Philadelphia and Reading Coal and Iron Company, has been operating the mine since 1856.

UTAH

Columbia Iron Mining Company.
A subsidiary to Columbia Steel Company.

This company has extensive iron ore holdings in Iron Co., Utah. During 1935 and 1936 the company opened the Black Hawk Ore Body and built and placed in operation a crushing and screening plant where the iron ore is prepared for use at the Ironton Plant of the Columbia Steel Company.

The ore bodies in this district are a contact formation occurring as a limestone replacement between limestone andesite and range from 150 to 450 ft. in thickness. The major portion of the ore is comparatively free from overburden so that practically all of the ore can be mined by open pit mining operations. Some of the ore bodies, however, have overburden of varying depths which are not so deep as to interfere with economical stripping and mining of the ore. The iron ore in the Iron Mountain District will analyze approximately 55% iron, 6% silica, .16% phosphorous with practically no sulphur.

The Los Angeles and Salt Lake Railroad Company has constructed a standard gauge railroad from Deseret Mound, Utah, to Iron Mountain so as to connect the Iron Mountain operations with the Cedar City branch. The distance from Iron Springs, which is the junction from the Cedar City branch to Iron Mountain, is approximately 16.5 miles.

The mine is operated by the open pit method, both the stripping and mining being handled by electric power shovels having 2½ yard capacity. These shovels are mounted on caterpillar tractors, move under their own power and load the ore directly into trucks which transport the ore from the pit to the crushing plant. The ore is drilled with electrically driven churn drills and will be minded by the bench system, benches being approximately 50 ft. high. The trucks which transport the ore from the pit to the crushing plant have a capacity of 28 gross tons pay load each. At the crushing plant the ore is dumped into a receiving hopper from which it is conveyed to a 48x60 in. jaw crusher by a 60 in. pan conveyor. The jaw crusher reduces the ore to seven inches maximum size and delivers the ore to a belt conveyor which in turn delivers the ore to the secondary crushers. The secondary crushing plant consists of a scalping screen, a gyratory crusher and a 5½ ft. cone crusher where the ore is crushed so as to pass through a 2 in. screen and is delivered onto a conveyor belt which in turn delivers the ore to the screening plant. At the screening plant the ore is screened into three sizes by a double deck screen. Each size is loaded separately into standard railroad cars. An automatic sampling mill samples each car of ore as it is being loaded.

Power for this operation is furnished by the Southern Utah Power Company at 33,000 volts. The power is received at the sub-station from which it is distributed to the various parts of the operation at 2300 and 440 volts. All inside electric wiring is placed in conduit and extreme care has been used in providing protective devices for employees as well as equipment. All units in the crushing and screening plant are interlocked so that in case of failure of any unit all preceding units will automatically be stopped.

The topography of the country is such that the ore for some time will be trucked down grade to the crushing plant and a minimum of rise is required for conveying the ore from one unit to another. The plant has a capacity for handling 300 tons of ore per hour.

Columbia Steel Company, a subsidiary of the United States Steel Corporation, Russ Bldg., San Francisco, Cal. W. A. Ross, Pres.; O. L. Pringle, V.-Pres. in charge of operations; J. R. Gregory, V.-Pres. in charge of sales; F. B. DeLong, V.-Pres. in charge of sales, Los Angeles district; C. T. Redmond, Secy.-Comptroller; E. H. Daniel, Treas.; E. V. Wilmar, Audit Supervisor; M. F. Kuehn, Assistant Comptroller; E. M. Stephens, Mgr. of Industrial Relations Department, all of San Francisco.

Plants, warehouses and mines are located at: Provo, Columbia and Iron Mountain, Utah; San Francisco, Pittsburgh, Los Angeles, Torrance in California; Portland, Oregon, Seattle, Wash.

Utah operations: C. T. Keigley, Gen. Supt., Provo; W. C. Miller, Local Auditor, Provo; A. C. Moore, District Sales Mgr., Walker Bank Bldg., Salt Lake City, Utah.

In Utah the company's plant at Ironton uses coal produced at Columbia and ore produced at Iron Mountain, together with other raw materials produced within the state for manufacturing coke and pig iron. The coke plant consists of 56 Koppers-Becker by-product ovens, by-product recovery plant and Koppers benzol plant; annual capacity 220,000 tons of coke, 1,320,000 gallons light oil. The coal mine at Columbia, Utah has an annual capacity of 432,000 tons. The blast furance has a height of 83 ft.; hearth 15 ft.; 9 in., bosh, 19 ft. 6 in.; was built in 1924, last relined in 1939; four stoves 85 by 20, 200,856 sq. ft. heating surface; two turbo blowing engines, 42,000 cfm., 25 lb. pressure; one Heyl & Patterson double-strand pig casting machine; one Dwight-Lloyd sintering plant, annual capacity 121,000 tons.

Product mined: Basic and foundry pig iron, annual capacity 193,000 tons.

We received the following letter from Mr. H. G. Beck, Assistant Secretary of the Wisconsin Valley Trust Company, Wausau, Wis., dated Jan. 26, 1939. "This company was organized in the year 1884 with an issue of 30,000 shares of stock, par value $100. They are the owners and lessors of iron mining lands in the Gogebic Range, Iron Co., Wis. The operation of these mines has been

continuous and dividends paid have amounted to the original value of the stock. As you know, these dividends are of a depleting nature. They have operated two mines in the last 10 years and in the one they have reached a boundary limit and the success and continuance depends entirely on the iron deposits in the remaining mines. In regard to the value of the stock, the stock is very closely held and the last transfer as far as we can check was some time last year at a price of about 15. Since that time there has been several dividends declared and paid which would tend to decrease the value of the stock. At the present time we are informed that they have a reserve which amounts to $10 per share. We trust this information will suffice your need."

Kingston Mica Mining Company, Limited.

The property known as the Thirty Island Lake Mica Mine was operated intermittently during the early part of 1938 by S. H. Orser. In March it was acquired by Charles Keller, representing interests in the United States. A new company, with a capitalization of 15,000 shares of $1 par value, known as the Kingston Mica Mining Company, Limited, was formed, and an application for a charter was made. This was not obtained until April, 1939. The officers of the new company are: Charles Keller, Pres.; Stuart H. Richardson., V.-Pres.; Wm. C. Richardson, Secy.; Alfred Keller, Treas. The head office and mine office are at Godfrey.

The property consists of the south half of lot 5, concession II, Bedford Twp., Frontenac Co., and contains 100 acres.

ONTARIO **MICA**

The shaft is 130 ft. deep. During 1938, operations under the direction of Charles Keller were carried on from May 1 to December 31. Some 40 ft. of drifting was done.

Average of 7 men was employed.

Canada Talc, Limited.

Canada Talc, Limited, has an authorized capitalization of 250,000 shares of $1 par value, of which 200,000 have been issued. The officers and directors are: E. S. James, Pres.; Roy Taylor, V.-Pres., Secy.-Treas., & Gen. Mgr. C. A. Cameron, Dir. The head office and mine office are at Madoc.

The company owns and operates the Connolly and Henderson Mines, in Huntingdon Twp., Hastings Co. The combined properties consist of 3 claims, totalling 350 acres.

During 1938 the Henderson shaft, now known as No. 4, was deepened to 451 ft., and a level was established at 443 ft. A long heading to connect the workings of the two properties was begun from the 250-ft. level of the Connolly. A total of 650 ft. of drifting, 100 ft. of crosscutting, and 125 ft. of raising was done on the two properties.

Some 10,366 tons of talc were mined, of which 10,166 tons were milled.

The Gillespie mill was dismantled and some of the equipment was moved to the Canada Talc mill, which was enlarged to accommodate it.

An average of 29 men was employed throughout the year.

Texas Quarries, Inc., Austin, Tex. W. H. Johnson, Pres.; C. H. Owens, V.-Pres and Mgr.; J. J. Kell, Supt.
Property: Texas Quarries Granite Deposit, comprising 160 acres, 35 miles east of Victorville and 8 miles east of Lucerne, San Bernardino Co., Cal.

A massive outcrop of granodiorite occurs in a series of granite hills that strike north and south. The color of the granite quarried is pearl white to oxford gray, of very fine texture and hardness.

The quarry is 200 ft. in length by 100 ft. in width. Equipped with 30-ton Insley steel derrick, with 100-ft. boom. A 125-h.p. caterpillar diesel engine drives winch; also 300-cu. ft. Ingersoll-Rand compressor. Sizes of granite blocks quarried are as follows: 11 ft. 4 in. by 3 ft. 10 in. by 2 ft. 10 in.; 8 ft. by 3 ft. 6 in. by 2 ft. 6 in.; 9 ft. 4 in. by 7 ft. 5 in. by 10 in.

The granite is hauled by trucks to finishing plant at Victorville. Equipment consists of 30-ton steel derrick, with 80-ft. boom; polishing machines; 2 wire-cutting machines; 3 finishing machines and 150-cu. ft. compressor.

The finished product shipped is known as Lucerne Golden Vein Granite, Lucerne Oxford Granite, Lucerne Pearl White Granite. 25 men are employed.

IDAHO

Crystal Lime Company, Clearwater Co., Idaho.
Office: Orofino.
Officers: Dr. W. F. Robertson, Pres.-Mgr.; L. L. Loomis, Secy., both of Orofino.
Incorporated: Jan. 2, 1936. Charter forfeited Dec. 1, 1939.
Capital: 750 shares; par value $100; number issued, not given.
Property: Lime Mountain group, 238 acres, held under lease from the State of Idaho.
Development: "This lime rock mined by open cuts."
Plant: Complete equipment which includes hoist, compressor, kiln for burning lime, cook and bunkhouse, mill buildings and shop.
Mineral sought: Lime rock.
Employees: Men, average 8.
Report: Output for fiscal year about 100 tons.

Idaho Portland Cement Co., Bannock, Idaho.
Office: Inkom.
Officers: Eugene Enloe, Pres.; Raymond Enloe, Secy., both of Spokane, Wash.
Incorporated: July 20, 1928.
Capital: 6,000 shares common, 4,564 shares preferred issued.
Property: 175 acres patented land, unorganized dist.; near Inkom.
Plant: For a complete description of plant see Idaho Thirty-first Ann. Rept. Min. Industry, 1929.
Product mined: Limestone.
Remarks: "This company owns certain grazing lands in Bannock Co., on which is located a deposit of limerock and shale suitable for the manufacture of Portland cement. The rock, in various grades, is so common in the vicinity that it can be classed as native. This particular formation lays in a bank or hill about 500 ft. high; it is fairly loose and there is no overburden. In a simple quarrying operation, completely superficial, it is loaded in cars and hauled to the manufacturing plant. The process of making Portland cement is purely a manufacturing operation. It is made by burning proper proportions of argillaceous and calcareous materials; no mineral is extracted and there is no mineral bearing rock used (with the exception of limerock) from which an extraction can be made. All stock issued and sold was for the purpose of acquiring the necessary land and the construction of the plant. The only items used exclusively for the earth removal operation are two power shovels, both exceedingly minor items as compared to the cost of the plant."

Product mined: Tungsten.

El Diablo Mining Company, c/o H. O. Johanson, Secy., Bishop, Cal.
Property: Leased 8 claims at Tungsten City, Inyo Co., Cal., from J. V. Baldwin Estate of Los Angeles, Cal. The ore body occurs in limestone at its contact with enclosing quartz diorite. This limestone trends north-south and stands practically vertical. The ore is scheelite, occurring in a gangue consisting of garnet and epidote. The ore occurs in lenticular masses from 50 ft. to 80 ft. long and 10 ft. to 20 ft. wide. Development consists of crosscut tunnel driven west 700 ft. with 200 ft. of drifts in the ore-bearing zone. Concentrate produced averages 70% WO_3. Six men employed.

Just Associates, Inc., 117 W. 9th St., Los Angeles, Cal. E. Richard Just, Pres.; Oliver Adams, Secy.
Property: Shadow Mountain Mines, comprising 30 claims on the north slope of Shadow Mountain, San Bernardino Co., Cal.

During the latter part of 1937, Nicholas Baxter discovered scheelite in crystalline limestone in this area and located a large number of claims. In January, 1938, these claims were acquired by the Just Associates, Inc., and prospecting and development work started on the property. The Shadow Mountain Tungsten Mines, Inc., Fay Wright, Pres., 811 W. 7th St., Los Angeles, secured an option on the property in May, 1938, and interested Rasmussen and Trout of the Macco Construction Co., in the deposit. This company dug 1800 ft. of trenches to a depth of 6 ft. to 10 ft. with power shovel. The work consisted of a series of zigzag trenches starting at the foot of the mountain and extending up the hill a distance of 1800 ft. to an elevation of 200 ft. During the latter part of 1938, a 60-ton portable concentration plant was installed on the property and treated about 300 tons of ore but the results were not satisfactory and operations were suspended.

The scheelite occurs in the limestone along the bedding planes and in a garnetiferous rock near contact of limestone and schist. The mineralized zone is 1100 ft. in length by 130 ft. in width, strikes N.S. and dips 35 deg. E. Along the contact

of schist is a large sill of quartz-feldspar aplite which shatters the formation, extending into the crystalline limestone for a short distance. The solutions that emanated from the intrusive magma have sealed the fractures and penetrated by replacement the crystalline limestone, depositing scheelite and silica and developed garnet and epidote as gangue minerals along the old structure of the limestone. The limestone belt is approximately 350 ft. thick. The ore exposed in the trenches and a shaft 60 ft. deep, is reported to carry from 0.25% to 1.5% WO_3. High grade selected samples carry as high as 15% WO_3. Six men are employed.

Molybdenum Corporation of America, 500 Fifth Ave., New York City. G. W. Sargent, Pres.: Marx Hirsch, V.-Pres.; T. J. Crawford, Secy., M. C. Whitaker, Eng.
Property: With Atolia Rand Placers, Inc., owns the Atolia Rand Placers, comprising 600 acres in the Atolia mining district, one mile southwest of Atolia, San Bernardino Co., Cal.

In 1934, the Molybdenum Corp. of America financed the building of a concentration plant having a capacity of 1500 cu. yd. per 24 hours. This new plant started operations October, 1934, and was operated until December, 1936, when operations were suspended. In 1938, H. H. Morse secured a lease on the property, operating the 100-ton concentration plant for the recovery of gold and scheelite; also operated the plant as a custom mill for gold and tungsten ores of the district. They are treating about 80 cu. yd. per day of gravel. Thirty-six men are employed.

The gravel deposit is erosion material from the Rand Mountains, washed down and deposited in narrow gulches. In the alluvium, through which there are several narrow channels, gravel has been deposited. This action has been intermittent resulting in "layers" which may be separated by a false bedrock of caliche. The general course of the channels is northwest-southeast. The area that has been tested with test holes is about 3 miles in length by one mile width. While these are concentrations on bedrock (quartz-monzonite), values are said to be disseminated throughout the alluvium, thickness of which varies from 8 ft. to 30 ft. The average gold content is said to be 70c per cu. yd. In addition to the gold it is estimated that the deposit will yield 2 lb. to 10 lb. of scheelite per yard.

Mill: The gravel was transported to mill by two 110 h.p. caterpillar tractors which handled two 10-cu. yd. LeTourneau scrapers to 350-cu. yd. capacity hopper, equipped with 5-in. spaced R.R. iron grizzly. From hopper 5-in. material is fed by automatic feeder to 24-in belt conveyor, 139-ft. centers to 28-cu. yd. circular, steel hopper. From hopper gravel goes to scalping trommel (5 ft. by 15 ft.) where it is screened to minus 2-in. size and to ⅝-in. size; oversize from trommel to 3 Hartz jiggs. The minus 2-in. goes over impact screens where it is screened to 16 mesh; plus 16 mesh material to 3 Joplin jiggs, while minus 16 mesh size goes to three 36-in. Ainley bowl separators where the gold is recovered; the Hutch product from Joplin jiggs to 3 Wilfley tables. The concentrates recovered on jiggs and tables carries 64% WO3; overflow from tables to sump tank; then pumped to 30-ft. in diameter, 8-ft. high Dorr thickener. From 1000 tons of crude material treated, they recover one ton of scheelite concentrates in 24 hr. Plant is driven by 350 h.p. Fairbanks-More diesel engine, direct-connected with Westinghouse generator. All equipment is driven by individual motors.

Water to operate plant is pumped from Cuddeback Lake, a distance of 8 miles, through 4-in. pipeline. Seventy-five horse power is required to operate pumps. The plant is idle at present (Sept., 1939) but if market for tungsten improves, there is a chance of resuming operations, with some changes to be made in flow sheet of plant.

Since the above was written, information is received that the Molybdenum Corporation of America and Atolia Rand Placers, Inc., owner, has changed to Pacific Scheelite Corp., controlled by the Molybdenum Corporation of America, who owns 90% of the stock and Atolia Rand Placers, Inc., owns 10% of the stock of this company. The concentration plant, with a capacity of 1500 cu. yd., operated from October, 1934 until 1936 when operations were suspended. It is stated that in recent months, a considerable amount of the original equipment used in the mill has been sent to other properties owned by the Molybdenum Corporation, such as tractors, original power plant and some jigs and tables.

Tungsten Corporation of California. W. R. Hees, Jr., Exec. V.-Pres & Treas., 811 W. 7th St., Los Angeles, Cal.
Incorporated in California, July, 1937.
Capital stock listed: Common, 100 shares.
Property: Black Rock Tungsten Mine, comprising 8 claims, 35 miles north of Bishop, Mono Co., Cal., under lease from Archie Beauregard, Laws, Cal.

The deposit is of the contact metamorphic type, occurring on the contact of limestone and dacite. Its strike is N. 10 deg. W.; dip varies from 20 deg. to 70 deg. In width it varies from 7 ft. to more than 50 ft. The gangue is largely garnet, with which is associated a little magnetite, calcite and pyrite, with a very small percentage of quartz. The scheelite occurs disseminated through this gangue in small particles.

Developed by two tunnels and a winze 100 ft. below lower tunnel; with a total of approximately 700 ft. of drifts. There are also two small glory holes.

From the mine, an aerial tram 850 ft. long conveys the ore to 100-ton bin; grizzly to gyratory crusher, screen to rolls, ball mill and tables. Concentrates are dried and cleaned by a Stolle electrostatic separator. Capacity of plant has recently been increased to 150 tons per day.
Employees: 45.
Development: 1937, 1938, 1939, 1940 development period.
Equipment: Modern 150/200 mill fully equipped, modern diesel electric power plant, modern mining equipment.
Product mined: Scheelite.

Property: Pine Creek Tungsten Mine on Morgan Creek, on the eastern slope of Sierra Nevada, about 20 miles west of Bishop, Inyo Co., Cal. The deposit is a product of contact metamorphism. The width varies from 15 to 50 ft. The mineralization consists of scheelite, molybdenite and chalcopyrite, in a garnetiferous gangue. The bodies have been developed, the combined length being 1000 ft. Development consists of crosscut tunnel 2500 ft. in length. Three hundred ton concentration plant. Sixty men employed.

BRITISH COLUMBIA

Columbia Tungstens Co., Ltd. Company office, 61 Broadway, New York, N. Y. Fl. Hewitt, Pres.; A. E. Pike, Mine Supt. The company owns and operates the Hardscrabble Mine on Hardscrabble Creek, 5 miles north of Wells. The property is equipped with a 50-ton pilot mill. Small-scale operations were carried on in 1939. During the first three months a crew of four men were employed in completing the power plant installation, keeping the mine dewatered, and salvaging and reconditioning equipment from the fire of the previous summer. During the next three months the pilot mill was under construction and a hoist and hoisting equipment were installed.

Underground development was resumed in June on a single-shift basis and the mill was started about the end of July. It was fed largely from two small stopes, until it was closed with the advent of cold weather in the late autumn. About 4½ tons of scheelite concentrate was shipped. Only shaft sinking was in progress at the end of the year. Mine-development consisted of 112 ft. of drifting, 47 ft. of crosscutting, 60 ft. of raising, and 18 ft. of shaft sinking. Maximum employment of twenty men was reached in July during mill construction. The average for the year was ten men.

SOUTH DAKOTA

Addie Mine, Pennington Co., S. D.
Product mined: Tungsten.

Bismarck Mine, formerly owned by the Bismarck Consolidated Mining Co.
Location: North of and adjacent to the Wasp No. 2 Mill, Lawrence Co., S. D.
Type of deposit: Replacement in the lower dolomites of the Deadwood formation, and to some extent in the basal quartzite.
Product mined: Tungsten, gold.
Remarks: Deposits have produced a small quantity of tungsten, but tungsten ore is known to occur over an area of 6 to 8 acres.

Black Bird Claim, formerly owned by Canfield, Hicks, and Roush.
Location: 4½ miles southeast of Hill City in an unorganized district, Pennington Co., S. D.
Property: 1 unpatented claim, approximately 20 acres.
Type of deposit: Quartz vein in pre-Cambrian schist.
Product mined: Tungsten.
Development: By trenching for a distance of 75 ft. along the strike of the vein; a vertical shaft approximately 40 ft. in depth, which is inaccessible.
Remarks: The vein is not well exposed and its size and extent are unknown. This is a prospect only.

Black Crystal.
Location: 5 miles northeast of Hill City, unorganized mining district, Pennington Co., S. D.
Ownership: G. H. Hardesty and Bert Hardesty, Keystone, S. D.
Property: 1 unpatented claim, approximately 20 acres.
Type of deposit: Quartz vein in pre-Cambrian slate and schist.
Product mined: Tungsten (wolframite).
Development: A 60 ft. shaft and some drifting and crosscutting; a prospect cut along the strike of the vein for a distance of about 30 ft. and at a depth of 7 ft. below the surface.
Remarks: No work done here since 1916.
Production: 1915, $425.

Black Diamond Claim.
Location: 7½ miles southwest of Hill City, Pennington Co., S. D.
Ownership: Bert Robinson, John Foster and George Grant, Custer, S. D.
Property: 1 unpatented claim approximately 20 acres.
Type of deposit: Quartz vein in pre-Cambrian schist.
Product mined: Tungsten (wolframite).
Development: The vein has been opened for a distance of 150 ft. along the strike by prospect trenches and test pits, maximum depth of which is 15 ft.
Remarks: This is a prospect.

Brosnahan Mine, Lawrence Co., S. D.
Property: On Upper Two Bit Creek, Lawrence C., S. D.
Product mined: Tungsten.

Champion Lode, formerly owned by Pennington and Smith.
Location: 4½ miles east of Hill City, unorganized mining district, Pennington Co., S. D.
Property: 1 unpatented claim, approximately 20 acres.
Type of deposit: Pegmatite 3 ft. to 6 ft. in thickness, wolframite occurring in the quartz and mica.
Product mined: Tungsten.
Development: The dike is opened up by several cuts to a depth of 20 ft. for a distance of 600 ft. along the strike.
Remarks: This is a prospect only.

ALABAMA

Alabama Barite Corporation.
Incorporated in New York on Dec. 29, 1938. The attorney is Lillian D. Rock, 122 E. 42nd St., New York City. The capital stock, according to our records is $60.

Alabama Marble Co., of New York.
Incorporated in New York on July 29, 1908, and filed certificate of dissolution on Nov. 28, 1919. The company's assets consisted of $500,000 of stock of the Alabama Marble Company of Alabama. The Alabama Company also had outstanding $94,450 of bonds. Interest on the bonds was discontinued on July 1, 1917. The bonds of the company were sold at 75 in January, 1914. On December 18, 1915, the treasurer of the company reported that the preferred stock of the New York company was worth $25 per share, and the com-

mon, worthless. On December 26, 1918, 227 shares of preferred stock and 201 shares of common stock were sold at auction for $36 the lot. The Central Hanover Bank & Trust Company of New York City acted as liquidating agent succeeding Mr. Henry Evans, who was President.

Alabama Marble Co. of N. Y.
The Central Hanover Bank & Trust Company of New York City, informed us on Jan. 9, 1941, that the proceeds of the liquidation were not sufficient to pay the company's outstanding debentures in full, leaving no equity for the stock. It would appear that the shares apparently became worthless about 1919 when the company dissolved. We found no quoted prices for these securities at any time in 1913 or 1915.

ARIZONA

Arizona Gold Mines Development Corporation, Phoenix, Ariz.

Clara Consolidated Gold & Copper Mining Co.
The Bank of America National Trust & Savings Bank, Los Angeles, Cal., informed us as follows on Oct. 9, 1940: "This refers to your letter of Oct. 4, seeking information concerning First Mortgage 6% bonds due 1925, of the Clara Consolidated Gold and Copper Mining Company. Almost in its entirety this bond issue was sold to citizens residing in France, and early in its history it got into difficulty, and a trustee in bankruptcy was appointed. The company was reorganized and taken over or consolidated with the Swansea Consolidated Gold and Copper Mining Company, who acquired its properties, subject to the bond issue which was then outstanding for approximately $1,000,000. The bonds matured in 1925, and neither the interest nor principal was paid. A bondholders protective committee was formed by a French syndicate, under which agreement some 6,120 bonds were deposited. The committee then instructed the trustee to foreclose under the bond issue. The decree of foreclosure was rendered the first day of May, 1926, and the proceeds of the foreclosure sale were insufficient to pay any claims to the bondholders, but sufficient to pay only attorneys fees, expenses, and to reimburse advances made to protect the property. This left nothing to be paid to bonds which were not deposited with the committee. After the committee acquired the property, it issued shares of stock to the bondholders who had deposited, and since 1926 we have had no further connection or duties with respect to the bonds or stock. We understand that the company, under which the stock was issued to the bondholders, was called 'Clara Swansea Mining Company', and that the stock books of this corporation are in the possession of Mr. O. M. Souden, 405 S. Hill St., Los Angeles, Cal. Several years ago information reached us that the mines of the company had been dormant, and in all probability the stock has little value. As there were no funds available from the proceeds of the sale to be applied on the non-deposited bonds, we must assume that any of the bonds of the Clara Consolidated now outstanding are worthless."

Fairhope Mining & Milling Company.
Incorporated in Arizona on June 15, 1907, and has failed to file reports and pay taxes since its inception. The charter of the company expired by 25 year statutory limitation on June 15, 1932. We searched our mining records back to 1907 and found no record of the company nor any value to the stock. The shares in our opinion have no value.

Idaho-Champion Mining & Milling Company.
Incorporated in Arizona in 1902, and lost its charter on June 28, 1927, having expired by 25 year limitation. We searched our mining records and files back to 1902 and found no record of this company's operations. The shares in our opinion have no value.

Nicklas Mining Company.
Incorporated in Arizona on Sept. 7, 1916, and since 1918 has failed to file reports or pay registration fees. The charter will be forfeited when legislative appropriation shall be made for such purpose. We found no record of this company's operations nor any value to the stock. The shares in our opinion are without value.

Oro Bueno Mining Company (Arizona).
The company's 25 ton cyanide plant was purchased by the Santa Maria Mining Corporation in 1938.

Pittsburgh Goldfields Nevada Mining Co., Arizona. (Expired).

Ranier Mines Corporation.
Incorporated in Arizona in 1917, and was located at 216 School St., Boston, Mass., in care of W. A. Dean. The company was petitioned into bankruptcy in October, 1922. The company had a bond issue of $500,000. The stock apparently is worthless.

Silver Museum Mining Company.
Incorporated in Arizona on Oct. 9, 1917, and has failed to file reports and pay registration fees annually as required by law. Under the provisions of the statutes of Arizona, the Arizona Corporation Commission is required to take action against all corporations which have failed for a period of two years or more to file annual reports and pay fees. This corporation will be declared legally dead when legislative appropriation shall be made for such purpose. We searched our mining records back to 1917 and found no record of this company's operations. We also wrote to the State Bureau of Mines at Phoenix, Ariz., and the Inspector of Mines, and was informed that they have no record of the above company. It is our opinion that the company ceased to exist soon after its inception and that the shares are without value.

Taviche Gold Mining Company.
Incorporated in Arizona and its charter expired in 1930. No reports were ever filed by the company. In Arizona charters expire by 25 year limitation. We searched our mining records back to 1905 and found no record of this company's operations nor any value to the stock.

FOREIGN

Bahia Corporation.
See report in the Robert D. Fisher Manual of Valuable and Worthless Securities, Vol. VI, 1938. Mr. David Bandler informed us on March 5, 1941, that the situation has not changed, and at the present time is trying to sell the company's machinery in Brazil.

British Guiana Consolidated Co., Ltd.
Incorporated in South Dakota in 1910, and is located at 50 Broad St., New York City, in care of the Exploration Company of New York. We addressed a letter to the Department of Lands and Mines at Georgetown, Demerara, British Guiana, requesting them to inform us what properties or concessions this company held there and received the following reply regarding the holdings of the British Guiana Consolidated Goldfields, Ltd., which is apparently a subsidiary of the above company: "With reference to your letter dated the 26th of Feb., 1940, I have the honour to forward herewith a list of the properties held by the British Guiana Consolidated Goldfields, Ltd., in this colony, and to inform you that all dues have been received to date." Signed Macy H. Green, Commissioner of Lands and Mines.
List of titles held by the British Guiana Consolidated Goldfields, Ltd.. (exclusive permission): 315, Konawaruk River, Essequibo, 500 acres; 342 West Kaburi, right bank, Mazaruni, 530 acres; 345, Tiger River, Potaro River, 1,200 acres; 348, Bed of Mowassie River and its tributaries, Essequibo River, 8,000 acres; 349, Essequibo River from mouth of Potaro extending downwards to Kura Kura, 20,000 acres; 350, beds of tributaries on right bank of Essequibo River from mouth of Potaro River extending downwards to Kura Kura, 10,000 acres; 353, both banks Konawaruk River, 520 acres; 354, bed of portion of Konawaruk River, 6,000 acres; 355, bed of portion of Potaro River, 20,000 acres; 356, bed of West Kaburi River, 11,045 acres; 297 (dredging concession), Mahdia River, Potaro, 445.34 acres; 339, bed of Mahdia River, right bank, Potaro River, 426.78; Exclusive permission: Beds of West Kaburi and Northwest Kaburi Rivers, left bank Kaburi River, left bank Mazaruni River, 1,400 acres.
The company informed us that in order to start operations considerable financing would be required. Until that financing is consummated, the stock has only a problematical value.

Cusi Mexicana Mining Company, 704 Lonsdale Bldg., Duluth, Minn.
Mr. W. F. Ferris, a director of the company, located at the above address, informed us on March 19, 1941, that this company now retains no properties of any description and has no plan of resuming operations. Mr. Ferris also stated that the United States Treasury ruled that the stock of the company became worthless in 1937. The company's balance sheet for the year ending Dec. 31, 1937, showed fixed assets of $45,002.00; investments of $50,704.22; current assets of $20,732.75; and prepaid expenses of $3,280.89; against which there are notes and salaries payable of $250,003.53. The shares on this basis are without value.

Giroux Consolidated Mines Co.
The Consolidated Copper Mines Corporation, located at 120 Broadway, New York City, informed us on Aug. 22, 1940, that the Giroux Consolidated Mines Company still owns the Sultana Mine in Mexico. The company received about $14,000 from leasing the property, but nothing has been done for several years. The taxes have been paid to date. Mining men have stated that the property has no commercial value. Therefore, as there are 1,500,000 shares of stock at 10c par, the stock has a value of less than 1c per share.

La Jara Gold Mines Company
Incorporated in Maine, and was located at 501 Fifth Ave., New York City, in care of J. W. Dunham. The company held 298 acres at La Jara, Tepic, Mexico. The company filed its last return in 1918 and was excused on March 4, 1918, having ceased to transact business. We searched the Mexican Mining Record for 1937 and did not find this company listed. It is our opinion that the company forfeited its land years ago and the shares are without value.

Goldfields Consolidated Mines Company, Silver Bow Co., Mont.
History: This was a holding company organized by L. O. Goodman, Hirbour Block, Butte, to purchase shares in other companies and to operate mining properties. It was capitalized at $25,000,000 but never became active, and has no assets so far as records are available.

Goldfields Consolidated Mines, Inc.
The Treasurer of Jefferson Co., at Boulder, Mont., informed us on May 2, 1940, that mining claims assessed to Ardsley Butte Mines Corporation were deeded by Tax Deed to Jefferson Co. on January 5th, 1940. The property was put up for sale at auction on April 27, 1940, in default of $472.66 for taxes. The company had until April 27, 1940 to redeem the property. The County Clerk of Jefferson County informed us on April 29, 1940, that the Ardsley Butte Mines Corporation did not on or before April 27, 1940, redeem its property that the County took a tax deed for on January 5, 1940.

The Treasurer of Madison County, at Virginia City, Mont., informed us on April 3, 1940, that the above company held no patented claims in their county.

It is our opinion that the company has lost its equity in the Ardsley Butte Mines Corporation, and its other properties, and therefore believe the shares of the subject company have no value.

Bull Frog Gold Crown Mining Company.
Incorporated in Nevada on Feb. 7, 1907 and forfeited its right to do business legally under its charter on the first Monday of March, 1924, because of non-payment of corporation tax. The last annual report filed March 23, 1907 showed the following: Pres., L. I. Scott, San Francisco, Cal.: V.-Pres., Henry Z. Osborne, Los Angeles, Cal.; Secy., W. F. Rambo, San Francisco, Cal.; Treasurer, W. F. Williamson, Oakland, Cal. The principal office was then located at 116 N. Carson St., Carson City, Nev., and the State Agent and Transfer Syndicate was the duly appointed resident agent. We received the following letter from W. F. Williamson, of Williamson & Wallace, 310 Sansome St., San Francisco, Cal., dated Oct. 21, 1939. "We are in receipt of your letter of the 10th instant in which you state that a client holds stock with the Bull Crown Mining Co., and you ask as to the present status of the company, etc. The writer acted as attorney in the formation and organization of this company some thirty years ago. From what is left of the skeleton files in our office, we note that a group of representative and responsible men employed us to form this company to take over some mining claims located in Nevada. We organized a company, secured permit for the sale of stock and there our connection with the company ceased. Upon receipt of your letter, we inquired from such of the incorporators as are still living and within reach as to what was done. They advise that very little stock was sold,—practically none, except to the incorporators; that the funds received were expended in examining the property and otherwise furthering the company's plans; but that for the want of additional money, the proposed purchase was not consummated and the whole enterprise was dropped. Under the circumstances, you can readily understand that the stock has no value even if, which we think is not the case, the company still has a charter. I am pleased to assure you that the organizers of this enterprise are all men of the strictest integrity and I am sure that whatever investment you made was properly applied." From the above information, it is our opinion that the shares are worthless.

Diamond Field Black Butte Reorganization Mining Company.
Incorporated in Nevada. According to our records no commercial ore in profitable amounts were found. In April, 1921, assessment No. 8 of 1c per share was levied. In 1925, an assessment of ½c per share was levied. Weir Bros. & Co. brokers, located at 25 Broad St., New York City, who were reported as the "Father" of this venture, informed us on Jan. 8, 1941, that they tried to keep the company going with assessments, but failed. Weir Bros. & Co., stated that the fortunate stockholders were those that did not pay the assessments. The shares are absolutely worthless.

Diamondfield Daisy Gold Mining Company, Room 2021, 30 Church St., New York City.
Statutory office: Giles Bldg., Goldfield, Nev.
General office: Room 2021, 30 Church St., New York City.

Property sold to Consolidated Virginia Mining Co. for stock.

Monarch Gold Ledge Mining & Milling Co.
The mill formerly owned by the above company, located on the Lincoln hwy., about 60 miles east of Fallon, Nev., which has been in legal difficulties during the past year, was recently acquired by the I. H. Kent Co., of Fallon. The Kent Co. purchased the plant to protect its interest in a second judgment against the property. The mill was constructed during 1932 and was operated only a short time when creditors having liens forced suspension of operations. The plant is complete and well constructed, with ample facilities for accommodation of employees. Ira L. Kent said the company has no intention of operating the mill but that the purchase was made solely to protect the company's interest. It is the intention, he said, to sell it, preferable as a unit or if this cannot be done during the next 30 or 60 days then to dismantle it and dispose of it otherwise.

Sandstorm-Kendall Consolidated Mining Co., Nev.
Company was in good standing until July 1, 1938. Principal office located at Deep Mines Bldg., Goldfield, Nev., and Ed. Lembcke is the resident agent.

Silver Pick Consolidated Mines Co., Nev.
Martin Judge, Jr. & Co., of San Francisco, Cal., states that the company is still in existence (4/29/38) and the President of the organization has an office about a block away from his office. There have been 47 assessments on the stock, the last being for 5c in 1924. Charter forfeited in March, 1934.

Sodaville Mining & Milling Co., Sodaville, Nev.
Purchased mill at Sodaville from W. & M. Mining & Milling Co. of Sodaville, Nev.

Storey County Mines Co., Nev.
Formerly operated the Overland Mine near Silver City, Nev. Control of mine was acquired by Nevada Securities Co. of Reno, Nev., in 1939.

Sunset Mining & Development Co., Nev.
Delinquent in the amount of $22.50 in fees and penalties, covering the period 1935 to Mar. 10, 1938. On June 22, 1934, the principal office was located at Mill City, Nev., and F. H. Earl was the resident agent. Mr. Edw. S. Van Dyck, P. O. Box 21, Dobbins, Yuba Co., Cal., states that there were a number of assessments made on stock of this company.

Tonopah North Star Tunnel & Development Co., Nev.
Company not operating at this time (April 19, 1938) but is negotiating for a gold property in California and if it can be acquired on proper terms work will probably be started and an assessment levied to finance the operation. The stock has been temporarily delisted on the S. F. Mining Exchange but has maintained and filed all reports required by the Securities & Exchange Commission so that when the company is financially able, it will pay the listing fees now due and have the stock reinstated on the Exchange. Company located at 333 Kearney St., Room 304, San Francisco, Cal., in care of M. Grotyohn. Mr. M. W. Burdick, Room 309 Bank Bldg., Main St., Tonopah, Nev., is the resident agent. Company in good standing until July 1, 1938.

Tuscarora Fairplay Mining & Milling Co., Tuscarora, Nev.

Vanderbilt Mines Company.
Incorporated: Nevada, and was located at Las Vegas, Nev. The company was delinquent in fees and penalties in 1937 amounting to $15. McNamee & McNamee of Las Vegas, Nev., reported in 1937 that the shares of this company have no value.

Verdi Mining Co., Tonopah, Nev.
Property: Tonopah Divide mining dist., Nev.
Mail returned in Oct. 1940.

Victory Divide Mining Company.
Incorporated: In Nevada and forfeited its right to do business legally under their charter on the first Monday of March, 1924, because of failure to file list of officers and pay fees and penalties amounting to $137.50. The incorporators were as follows: Floyd Cable, Goldfield, Nev.; Joseph Bruder, Goldfield, Nev.; H. E. Clark, Goldfield, Nev. The last list of officers filed June 23, 1919, showed the following: A. L. D'Arcy, Pres., Goldfield, Nev.; H. E. Clark, V-Pres., Goldfield, Nev.; Harry B. Ruhl, Secy., Goldfield, Nev. The principal office was located at Goldfield, Nev., and Harry B. Ruhl was the duly authorized resident agt. Supplementing our report rendered on May 2, 1939, we found that this corporation was reorganized in 1921 and the new shares were assessed. Therefore, as this is the old stock, the assessments were not paid and the shares are absolutely worthless and have been so since 1924.

NEW JERSEY

Allan Wood Mining Company, Oxford, N. J.
Property: Warren Co., N. J.

Franklinite Steel & Zinc Company.
Incorporated: New Jersey.
The properties of this company, and the Jersey

Franklinite Company, were sold, we understand, to the New Jersey Zinc Company. A liquidating dividend was paid to all stockholders of record, with the exception of one block of stock. The stock was not stamped or retired when the dividend was paid. I personally saw the dividend book and after each name is marked "Dividend Paid". The block that was not paid was found a few years ago. The Commercial Trust Company in Jersey City, N. J., held several thousand dollars in the name of these companies. The funds were turned over to the Chancery Court at Trenton, N. J., by the three trustees who had control of these funds. The holder of the large block of stock made claim for these funds in the Chancery Court and received a substantial amount for the stock. The remainder of the funds, we understand, went for court costs, attorneys' fees, and fees for the three trustees. There are no funds available for these shares today which are without value.

Tri-Bullion Corp.
Office of company is located at 576 Fifth Ave., New York City, in care of Dr. W. H. Colburn.

Tri-Bullion Smelting & Development Company.
This company was acquired by Tri-Bullion Corporation for its stock. The office of the latter corporation is located at 576 Fifth Ave., New York City, in care of Dr. W. H. Colburn. Dr. Colburn informed me on June 18, 1940, that the company owes many years taxes on its property, and unless metal prices improve within a short time the property will be sold for taxes. The property of the company was appraised at $50,000. in 1915. Dr. Colburn stated that if the property could be sold for that amount nothing would be realized by the stockholders after paying taxes, amounts owed to officers of the company and costs of liquidation. In view of the above we submit the shares as worthless as of February 4, 1940, the date of the decedent's death.

NEW YORK

Benson Iron Company, c/o J. H. Leonard, Newton Falls, N. Y.
Property: 1927.30 acres burned land, a farm of 40 acres and denuded land of 1,000 acres, 12 houses, boarding house, water tank and a portion of Wanakena railroad grade near Benson Mines, St. Lawrence Co., N. Y. The total assessment is $9,550. Mr. Leonard is supervisor of the Town of Clifton.

Benson Mines Company.
The Benson Iron Company, Inc., located at 663 Main Ave., Passaic, N. J., informed us on April 18, 1940, that the old stockholders in the Benson Mines Company received a smaller amount of common stock in the Benson Iron Company, the present owner of the property, for their stock. The exact details of the exchange are given in the minute book which is now in the possession

of the Secretary of the company, Gordon L. Benjamin, c/o Gulf Refining Company, 17 Battery Pl., New York City. The Treasurer of St. Lawrence Co., at Canton, N. Y., informed us on March 29, 1940, that the property of the Benson Mines Company in the Town of Clifton, N. Y., is now assessed to the Benson Iron Company. The property consists of 1927.30 acres of burned land, a farm of 40 acres and denuded land of 1,000 acres, 12 houses, boarding house, water tank, and a portion of old Wanakena railroad grade near Benson Mines. The total assessment is $9,550, and the name of the party to whom tax bills are rendered is Mr. J. H. Leonard, Newton Falls, N. Y. Mr. Leonard is supervisor of the Town of Clifton.

Davison, C. C., Milling Corporation.
Incorporated in New York, and was located at Geneva, N. Y.
The corporation was dissolved by proclamation on Dec. 15, 1936. The Chamber of Commerce at Geneva, N. Y., informed us on May 24, 1940, that the C. C. Davison Milling Corporation went out of business about 6 or 7 years ago and that the preferred and common stock has no value whatever.

General Chemical Co., Pulaski, Va. Mine: Huey Mines, Branch of New York, N. Y.

Guymard Silver-Lead Company.
Incorporated in New York on Feb. 15, 1877, and was located at Guymaid or Guymard, N. Y.
The corporation was dissolved by proclamation of the Governor on April 2, 1924. This company apparently went out of business before 1900 as we found no record of this company's operations. The county assessor of Orange Co., at Goshen, N. Y., found no record of this company, as holding any mining claims. It is our opinion that the shares have no value.

PENNSYLVANIA

Bangor-Fidelity Slate Company (Pennsylvania).
The First National Bank of Bangor, Pa., informed us as follows on Aug. 8, 1940:

"We have your letter of the 6th inst. requesting information regarding the present value of the First Mortgage Bonds of the Bangor Fidelity Slate Company.

"This is to advise that the Bangor Fidelity Slate Company was adjudicated a bankrupt on or about May or June of 1937. The assets of the company were sold by the Trustee in Bankruptcy. This action naturally divested the outstanding bonds, so that there is no value whatsoever to them.

"The purchaser of the assets of the Bangor Fidelity Slate Company has made several attempts to organize a company to reopen the quarry, but to date has been unsuccessful."

Bolivar Coal Corporation.
See Fairfield Coal & Coke Co.

Fairfield Coal & Coke Company.
Company is located at Bolivar, Pa. Changed its name to Bolivar Coal Company. The liquidating agent of the Bolivar National Bank at Bolivar, Pa., informed us on May 17, 1940, that the Bolivar Coal Corporation has not operated for quite a number of years and their mines are no doubt filled with water. He also stated that no taxes have been paid on the company's real estate for a number of years. It is believed that one of the banks at Jeanette, Pa., owns or did own a large amount of these bonds.

Pine Hill Collieries Co.
A Trustee was appointed on May 16, 1939, by the United States District Court at Philadelphia, Pa. The plan of reorganization was filed by the Trustee with the court. This plan states that the stockholders forfeit all their rights and interests as shareholders. It would therefore appear that the shares should be allowed to be deducted as worthless for income tax purposes for the year 1939.

Sioux Consolidated Mining Company.

This company was reorganized as the Sioux Mines Company, which was incorporated in Utah in 1917, and is located in the Walker Bank Bldg., Salt Lake City, Utah. The last assessment No. 17 of ½c per share was levied on the Sioux Mines Company stock in April, 1929. Therefore, as you hold the old stock it was declared worthless long ago because of the assessments of the new stock.

Snake Creek Consolidated Mining Co.

Incorporated in Utah and is located at Judge Bldg., Salt Lake City, Utah. Henry Shields, Pres.; Lester Rankin, Secy.; W. I. Snyder, V.-Pres.

Mr. Snyder informed us on Oct. 29, 1938, as follows: "In response to your inquiry above regarding the Snake Creek Consolidated Mining Company, I might say the company is in good standing and has kept the taxes paid on its mining claims. The stock has no particular market value as it has never been listed on any exchange, and except for an isolated transfer, there has been no dealing in the stock of recent years. I have been acting as secretary merely, with office at 419 Judge Bldg., Salt Lake City."
